Manufactured for

DIRECTIONS FOR MANUFACTURING RAT OR MOUSE BAIT:

Mix this product thoroughly with cracked or ground grains, dog food, or other edible inert baiting materials. Use 1 part "RAT-OLA" PROLIN Concentrate to 19 parts by weight of inert bait.

DIRECTIONS FOR USE OF RAT

Place 4 to 6 ounces of bait in dry container next to burrows in runways, or where rats are accustomed to feed. Assure an uninterrupted supply of bait for a period of not less than 12 days and continue baiting until all signs of feeding have stopped. Replace stale, damp or moldy baits with fresh bait.

DIRECTIONS FOR USE OF MOUSE BAIT:

Place tablespoonful amounts of bait in hollow containers where mice or signs of mice have been seen. Bait stations at intervals of 8 to 12 feet are recommended. Assure an uninterrupted supply of bait for a period of not less than 12 days.

CAUTION:

Protect children, pets and domestic animals from bait. If swallowed by humans, domestic animals or pets, this material may reduce the clotting ability of the blood and cause bleeding. In such case, intravenous and oral administration of vitamin K combined with blood transfusions are indicated as in the case of hemorrhage caused by overdoses of bishydroxycoumarin.

This rodenticide contains warfarin, an anticoagulant chemical that reduces the clotting ability of the blood and, upon repeated feedings, causes fatal hemorrhage in rats and mice. It also contains an antibacterial agent which inhibits bacteria that produce vitamin K, an antidote for warfarin.

WARRANTY: Seller makes no warranty, expressed or implied, concerning the use of this product other than indicated on the label. Buyer assumes all risk of use and/or handling of this material when such use and/or handling is contrary to label instructions.
