

### GALLONS

AMINE No. 40 is recommended for controlling Arrowhead, Dandelion, Docks, Herbit, Goldenrod, Lambs-quarters, Mustards, Peppergrass, Pigweed, Plantains, Ragweed, Shepherd's-purse, Thistles, Wild Carrot, Wild Morning-Glory, Wild Radish, and many other 2,4-D-susceptible broadleaved weeds in crops. AMINE No. 40 is recommended for use on lawns, golf courses, parks, pasture lands and around farm buildings. Do not apply to newly seeded areas or after heading begins. This product is not suggested for use where St. Augustine grass, Dichondra, bent grass and carpet grass are used as lawns because of possible injury to these plants.

### GENERAL DIRECTIONS

AMINE No. 40 should be diluted with water in the following dilutions:

1 Gal. to 100 Gals. Water Treats 2 acres  
 1 Qt. to 25 Gals. Water Treats 1 acre  
 1 Pint to 12 Gals. Water Treats 1/2 acre  
 Pt. to 6 Gals. Water Treats 5,500 sq. ft.

3 Tablespoons to 1 Gal. Water Treats 1,000 sq. ft.  
 Apply solution of AMINE No. 40 with sprayer or sprinkling can when weeds are actively growing, preferably late spring or early fall. One effective spraying should kill weeds in 1 to 3 weeks. Later spraying may be necessary to kill seedling plants that have grown since first spraying. The recommended concentration should be doubled for the hard to control weeds such as varrow, golden-rod and poison ivy. Deep rooted weeds may require repeated applications.

### CAUTION

Avoid contact with eyes, skin and clothing. Do not take internally. Avoid spray drift to susceptible plants as this product may injure cotton, beans, grapes, peas, ornamental crops, clovers and flowers. Avoid contact with all desirable vegetation not to be killed. Coarse sprays are less likely to drift. Clean spray or sprinkling can thoroughly before using for other purposes. Do not store near fertilizer, seeds, insecticides or fungicides. Do not graze dairy animals within 7 days after treatment.

# AMINE No. 40

## 2,4-D

## WEED KILLER

For Weed Control in Corn, Sorghum, Small Grains.  
 Contains 4 lbs. 2,4-D Acid Equivalent Per Gallon.

**CAUTION:** KEEP OUT OF REACH OF CHILDREN.  
 SEE SIDE PANEL FOR COMPLETE CAUTION STATEMENT.

### ACTIVE INGREDIENTS:

Dimethylamine Salt of 2,4-Dichlorophenoxyacetic Acid\* 49%

INERT INGREDIENTS 51%

TOTAL 100%

\* 2,4-Dichlorophenoxyacetic Acid  
 4.2 lbs. Acid equivalent per gallon

Patented in U.S. Pat. 2,322,741 and 2,326,471

### GALLONS

### WEED CONTROL IN CORN AND SORGHUM

AMINE No. 40, when applied with care, affords excellent control of weeds. It should be applied when corn and or sorghum is 6 to 12 inches tall. Application should be delayed until a maximum number of weeds has emerged. The recommended dilution is 1/2 of a pint of AMINE No. 40 in 5 to 10 gallons of water evenly distributed over an acre. The weed killer solution should be applied with a low pressure row crop sprayer or with a combination cultivator and sprayer, at the time of either the first or second cultivation. The spray should be directed at the base of the plants from the sides, allowing as little spray as possible on the crop leaves.

### WEED CONTROL IN SMALL GRAINS

Wheat, Oats, Barley can be successfully treated with AMINE No. 40 using 1 pint per acre in the required amount of water for even distribution. Grain should be treated when it is 4 to 8 inches high. It should not be treated before tillering nor after it has reached the boot stage. For best results spraying should be done when air temperatures are high and soil is moist enough to foster good growth of crop and weeds. On easy to kill weeds, such as mustard, half the recommended amounts may give satisfactory results.

### WARNING

Seller makes no warranty, express or implied, concerning use of this product. Buyer assumes all risk of use or handling whether in accordance with directions or not.
