

# Proposed new Hose - end directions Amendment 121319 6/14/90

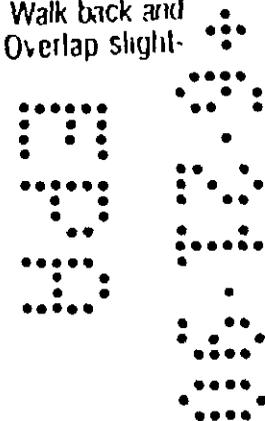

Connect spray nozzle to hose. Rubber washer should be checked for proper position. Determine area to be treated. For example, 75 sq. ft. = an area measuring 5 ft. x 15 ft.

Remove bottle cap and screw bottle into nozzle (save bottle cap for storage after use). Check siphon tube for proper position. Do not squeeze bottle while attaching nozzle, or during application as contents may discharge. To store unused product: Turn off water supply at tap. Remove bottle from sprayer and replace original bottle cap. Remove nozzle from hose and rinse in clear water.

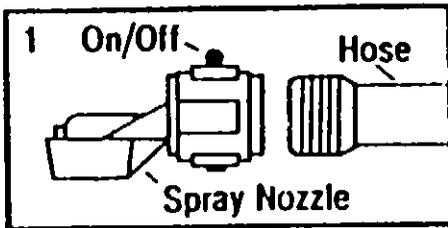

Hold bottle attached to hose in one hand and turn on the water at the tap. This product will mix automatically at the proper ratio. While holding sprayer at waist level, point in direction away from face and body. Walk back and forth at a brisk, steady pace. Overlap slightly for uniform coverage.

# Directions for Use

1. Attach nozzle to hose.
2. Make sure nozzle is OFF by rotating shut-off collar to off position.
3. Remove cap from bottle. Do not remove green disc from bottle mouth.
4. Attach bottle to nozzle firmly. This seats disc to nozzle.
5. Turn water fully on at faucet.
6. Swing nozzle and hose in line with bottle handle for easier spraying.
7. Rotate shut-off collar to ON position and commence spraying.

**WE ALL MAKE MISTAKES.** If you happen to spray your favorite flower, bush or new automobile, simply pull the "water only" plug and rinse off the object you mistakenly hit. Replace plug and continue spraying.
