PURINA DRINKING WATER SANITIZER

Purina Drinking Water Sanitizer is a complex iodine germicide specifically made to sanitize poultry drinking water. This form of iodine reduces the corrosive and irritating nature of iodine without reducing its germicidal properties.

HOW TO USE:

STOCK SOLUTION: When water is added to Purina Drinking Water Sanitizer, the solution foams excessively, making accurate dilution difficult. To avoid foam, place one gallon of water *less one cupful* in a one gallon jug. Add one cupful (8 oz.; ½ pint) of Purina Drinking Water Sanitizer and mix thoroughly.

DRINKING WATER SANITIZING: Add 1 teaspoonful of Purina Drinking Water Sanitizer to 3 gallons of water, or use *Stock Solution* at the rate of 1 ounce (2 tablespoonfuls) to one gallon.

PROPORTIONERS: Use a water proportioner which dilutes at the rate of one ounce per gallon and use *Stock Solution* as the additive.

To wash and sanitize poultry waterers, use 1 oz. in 2½ gallons of water or add a small amount directly to the waterer, clean, rinse.

WARNING: Keep Out Of Reach Of Children. Causes severe eye or skin irritation. Do not get in eyes, on skin, or on clothing. Harmful if swallowed. Avoid contamination of food.

FIRST AID: In case of contact, immediately flush eyes or skin with plenty of water for at least 15 minutes. For eyes, call a physician. Remove and wash contaminated clothing before re-use. If swallowed, drink promptly a large quantity of milk, egg whites, gelatin solution, or if these are not available, drink large quantities of water. Avoid alcohol. Call a physician.

Rinse Empty Container Thoroughly With Water and Discard It.
