PURINA LICE AND FLY KILLER: A dust, 10% CIOCRIN and 3% powder for use on dairy or beef cattle. No withdrawal period is required when used on animals treated for slaughter.

DIRECTIONS—DUSTING POWDER

For the control of hornflies on beef and lactating dairy animals, apply 1/2 to 1 ounce of dust to the back, neck, and sides, covering in addition the head, neck, and upper portions of the sides. Repeat above application if necessary to maintain control, but not more often than once every 14 days. Wash animal thoroughly after use.

For control of lice on dairy or beef cattle, treat animals thoroughly. If required, repeat in 3 to 4 weeks. Wash hands thoroughly after use.

CAUTION: KEEP OUT OF REACH OF CHILDREN. If swallowed, induce vomiting immediately and get medical attention. Atropine is antidotal. 2-PAM is also antidotal and may be administered in conjunction with atropine.

Avoid prolonged or repeated inhalation of dust and contact with skin. In case of contact with skin or eyes, flush with plenty of water; for eyes, get medical attention. Wash thoroughly with soap and water after handling and before eating or smoking.

Do not contaminate feed, water, or other stuffs. Keep away from open flames. Do not contaminate any body of water by direct application, or removal of equipment and disposal of wastes or containers.

Do not treat calves under 6 months of age. Brahman cattle should not be treated as they may show hypersensitivity to organic phosphates.

DESTROY USED CONTAINERS. Do not reuse for any purpose. Destroy containers by crushing or burying in an isolated area. If buried, keep out of stock.
