

DIRECTIONS (Continued)

Valuable in cage layer operations by sprinkling in the alleys and under cages.

The number of applications per week is entirely dependent upon the fly population. It is important to always have the bait present in areas frequented by flies for constant control. Avoid sprinkling in litter and other places where it may sift away out of reach of flies.

CAUTION: Induce vomiting if swallowed. Avoid prolonged or repeated contact with skin, wash thoroughly after using. Do not use inside homes. Do not contaminate milk, milk handling equipment, feed or drinking water. If poisoning should occur, call a physician at once. Atropine is antidotal.

FLY BAIT

UNDER NO. 606-69
FOR EQUINE
FLY BAIT

WITH DDVP

A FLY BAIT FOR USE EITHER AS IT COMES FROM THE CAN OR MIXED WITH WATER AND USED AS A SYRUP. EFFECTIVE AGAINST FLIES RESISTANT TO DDT OR OTHER CHLORINATED HYDROCARBONS.

Active Ingredients

2, 2-dichlorovinyl
dimethyl phosphate . . . 0.46%

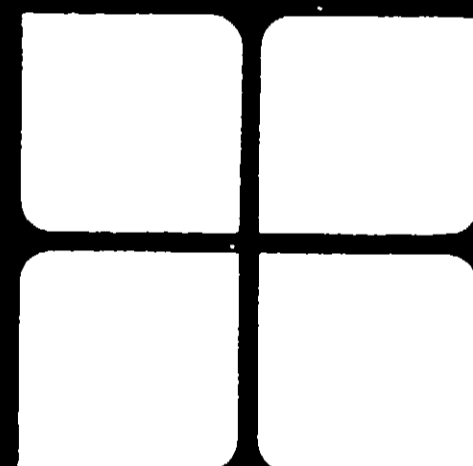

Related Compounds . . . 0.04%

Inert Ingredients 99.50%

CAUTION: Keep out of reach of children. See other cautions on side panel.

DIRECTIONS

Use as a dry sprinkle fly bait as it comes from can, or dissolve 1 lb. in 1/2 gallon of water and use as a syrup. The syrup may be used in a sprinkler can or pieces of burlap may be saturated and hung up in areas frequented by flies. Make up only that amount of syrup needed for immediate use. Use wherever flies congregate, in all livestock buildings including dairy barns and milk rooms, poultry houses, around garbage cans, dumps, and outside of human dwellings, restaurants, drive-ins, ice cream stands, dog kennels, etc. Sprinkle lightly either wet or dry on exposed surfaces such as floors, walkways, alleyways, etc. Use about 1/4 lb. per 1000 square feet of floor area.
