Cold Disinfection

For disinfection of previously cleaned surgical instruments, barber tools and dental equipment, simply submerge instruments into solution containing 1½ ounce per gallon of water for 10 minutes.

FOR ROOM FOGGING

DIRECTIONS:

To minimize the danger of cross-contamination from environmental surfaces apply solution as a fog described below, before applying standard routine terminal cleaning and disinfecting practices. 1. Remove all human, animal, and plant life from room. 2. Open closet doors and drawers. 3. Set up 34" revolving platform in center of room. 4. Mount BURGESS MODEL NO. 1601 MISTER or other fogging device delivering equivalent spray at 3 RPM. 5. Fill sprayer reservoir with 1.5 oz. to 1 gallon of water to produce 1150 ppm active ingredients. 6. Set sprayer mechanism to deliver 1 gallon of solution. 7. Fog for 15 minutes for an average 2100 cu. ft. room. For different room sizes, vary spray time proportionately to ensure complete wetting of exposed

surfaces. 8. Wait 2 hours before entering room after treatment. 9. Rinse fogging equipment thoroughly with clear water following use.
