General Information

Application of Methyl Parathion 1.5 Thiodan 3 E.C. should begin when insect infestation reaches the point where control is desired. Full coverage of plants during application is essential for good control. The material should be used for the insects listed above at the rate given in sufficient water to provide uniform coverage. Application should be made 3 to 5 day intervals depending upon the severity of the infestation and the conditions. To mix, fill the spray tank ½ to ¾ full of water and add to the agitator the required amount of this material. Fill the tank with water.

[illegible]
