

## DIRECTIONS FOR USE

### As An Animal Spray Or Dip

To control Horn Flies, Cattle Lice, Ear Tick, Lone Star Tick, Fleas, Fleece Worms and Winter Tick on beef cattle, horses or hogs: dilute 1 gal. with 150 gals. of water and mix thoroughly to produce a creamy emulsion. For best results, spray animal thoroughly, wetting all parts of the skin. About 2 quarts of spray are required for a full grown horse or cow, proportionately less for smaller animals. Do not overdose young animals.

For initial killing action and shorter residual control of cattle lice and horn flies, dilute 1 gal. Thompson's Multi-Tox TM with 150 to 200 gals. of water and apply as above.

To control Goat Lice, Sheep Lice, and Keds, dilute 1 gal. with 200 gals. of water and mix to complete emulsification; spray animals thoroughly for best results. Always mix well when used as a Dip. Do not treat goats intended for consumption as meat.

To control Scabies (Psoroptic-Common or body scab, and Chorioptic or foot scab): mix 1 1/2 gals. with 150 gals. of water to produce 0.5% concentration which will usually control these scabies in single dipping. The animal should be completely submerged and the head of each ducked at least once. Infested and exposed animals must be held in the vat for a full minute. Calves should be dipped separately from larger and heavier animals in such a manner as to avoid the ingestion of dip fluid. The dip should be frequently checked at vat-side when large bands are dipped in order to maintain proper dipping strength. Always stir dip well before using.

### DILUTION TABLE

Thompson's Multi-Tox TM	Volume of Water	
	Livestock Spray or Dip	Premise Spray
1 fl. oz.	1 1/4 gallon	
1/2 pint	10 gallons	3 gallons
1 quart	37 gallons	12 gallons
1 gallon	150 gallons	48 gallons

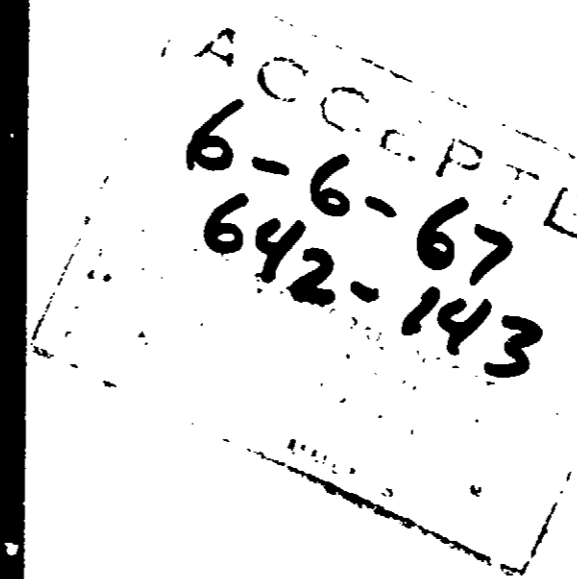

Made in U.S.A.

### As A Premise Spray

To kill Flies, Fleas, Mosquitoes, Roaches, Ants, and certain other insects around barns, barnyards and buildings dilute 1 pint with 6 gals. of water. Thoroughly wet all surfaces where flies, mosquitoes, and certain other insects might or crawl, and spray all cracks and crevices where roaches and ants may hide. For Fleas, thoroughly spray places where animals sleep. Repeat applications as necessary. Do not treat animals with this dilution. Do not use in dwellings.

### Use On Backrubbers For The Control Of Horn Flies On Beef Cattle

Dilute 1 gal. with 9 gals. of fuel or furnace oil. Saturate one backrubbing unit with a gallon of this solution. Re-saturate every 2 weeks with 2 quarts of solution. Do not permit beef cattle access to backrubbers within 28 days of slaughter.

**CAUTION:** As a general precaution in spraying animals, avoid treatment during cold, stormy weather; do not treat over-heated or sick animals; water animals before dipping to prevent them from drinking the dip.

Do not use on dairy cows, dairy goats, dogs, cats, fish, poultry, or in dairy barns or poultry houses. Do not use on new-born (very young) animals or calves under three months of age. Spray older calves with a minimum amount of material if they must be treated. Do not use on animals within 28 days of slaughter.

### WARNING

May be fatal if swallowed. Do not inhale spray. Do not get in eyes, on skin, or clothing. Wash exposed skin thoroughly after use.

Toxic to fish and wildlife. Do not contaminate streams, lakes, or ponds with washings from spray tanks or dipping troughs. Avoid contamination of feed and foodstuffs.

Rinse equipment and containers and dispose of waste by burying in non-crop lands away from water supplies. Containers should be disposed by punching holes in them and burying with waste or by burning. Keep out of smoke.
