UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

WASHINGTON, D.C. 20460

OFFICE OF PREVENTION, PESTICIDES AND TOXIC SUBSTANCES

MAY - 2 2002

Mr. Richard Miller Prentiss Incorporated C.B 2000 Floral Park, NY 11001

Dear Mr. Miller:

Subject: Revise per Agency letter dated October 25, 2001 Prentox Diazinon AG 500 Insecticide EPA Registration Number 655-459 Your submission dated April 22, 2002

The labeling referred to above, submitted in connection with registration under FIFRA section 3(c)(7)(a), is acceptable and a stamped copy is enclosed for your records.

There are some additional minor revisions that should be made at the next label printing:

- a. Delete the Non-Agricultural Use Requirements block and its associated text, since all the uses remaining on this label are agricultural uses.
- b. Revise the limitation "Do not apply to food crops grown in greenhouses." to read "Do not apply in greenhouses." in the General Information section and in the text appearing under the Vegetable Crops minimum gallonage table.
- c. In both the Vegetable Crops minimum gallonage table and in the Vegetable Crops PHI table, revise the crop name "Casabas" to read "Casaba Melons" and revise "Crenshaws" to read "Crenshaw Melons".

Sincerely,

George T. LaRocca Product Manager 13 Insecticide Branch Registration Division (7505C)

your Blate of I rite, some un the **哈斯特**托 e și chilaiter AGRICULTURAL USE REQUIREMENTS! A Construction of agricultural workers on home standard, 40 CFR Part 170. This is the handler of agricultural pesticides. It contains requirements for marine, forests, nurseries, and greenhouses, and the handler of agricultural pesticides. It contains requirements for marine, decontainination, notification, and emergency assistance? It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and testricted entry/interval (This requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard. 1. 1. 18 Do not enter or allow worker entry into treated areas during the restricted entry interval. EXCEPTION: If the product is soil injected or soil incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

mault the agency respon-

For any requ

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is: coveralls, chemical resistant gloves, such as barier laminate or viton, and shoes plus socks.

## NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Do not permit children or pets to go onto treated areas until spray has dried.

FAILURE TO FOLLOW THE DIRECTIONS FOR USE AND PRECAUTIONS ON THIS LABEL MAY RESULT IN POOR INSECT CONTROL, CROP.INIURY, OR ILLEGAL RESIDUES.

## GENERAL INFORMATION

Prentox Diazinon AG500 is an emulsifiable solution which, when diluted with water according to the directions, is intended for the control of insect pests of agricultural crops and other plants. Do not use on food crops grown in greenhouses. Do not use in barns or dwellings. Do not use on livestock.

To avoid spray drift, do not apply under windy conditions. Avoid spray overlap, since crop or plant injury may result.

In the directions for use which follow, best control is obtained when application is made at first sign of pests. Application should be repeated only as directed to maintain control.

## WORK SAFETY RULES

REPEATED EXPOSURES TO CHOLINESTERASE INHIBITORS SUCH AS ARE CONTAINED IN THIS PROD-UCT MAY, WITHOUT WARNING, CAUSE PROLONGED SUSCEPTIBILITY TO VERY SMALL DOSES OF ANY CHOLINESTERASE INHIBITOR.

When handling Prentox Diazinon AG500, do not rub eyes or mouth with hands. If you feel sick in any way, STOP work and get help right away. See First Ald section of this label.

NOTE: The California Department of Agriculture has set a 5-day reentry period for diazinon on grapes, peaches, and nectarines. For each should elapse between the time of application and the time a worker may enter the field to engage in any activity requir-ing substantial contact with treated foliage. When a mixture of two or more organophosphate pesticides are applied in combination, the interval should be prolonged by adding to the largest applicable interval an additional 50% of that interval

## SPRAY EOUIPMENT

Applications of Prentox Diazinon AG500 using sufficient water volume to provide thorough and uniform coverage generally provide the most effective pest control.

To avoid spray drift, do not apply when conditions favor drift from beyond the target area. Avoid overlap because crop injury may occur

Equip sprayers with nozzles that provide accurate and uniform application. Be certain that nozzles are the same size and uniformly spaced across the boom. Calibrate sprayer before use.

## MIXING PROCEDURES

Thoroughly clean spray equiment before using this product. Prepare only the amount of spray mixture needed for the immediate application. Vigorous agitation is necessary for proper dispersal of this product. Maintain maximum agitation throughout the spraying operation. Do not let the spray mixture stand in the spray tank overnight. Flush the spray equipment thoroughly following each use.

## 1. Prentox Diszinon AG 500 Alone:

Add 1/2 of the required amount of water to the mix tank. With the agitator running, add the Prentox Diazinon AG500 to the tank. Continue agitation while adding the remainder of the water. Begin application of the solution after the Prentox Diazinon AG500 has completely dispersed into the mix water. Maintain agitation until all of the mixture has been applied.

## 2. Prentox Diazinon AG500 In Tank-Mixtures:

# NOTE: Do not mix Prentox Diazinon AG500 with any formulation of Captan® or Captec® because crop injury may occur.

Prentox Diazinon AG500 is compatible with most insecticide and fungicide products; however, physical compatibility with tank-mix partners should be tested before use. Using a quart jar, add the proportionate amount of each product to 1 qt. of water. Add wettable powders and water-dipsersible granular products first, then liquid flowables, and emulsifiable concentrates last. After thoroughly mixing, let stand for at least 5 minutes. If the combination remains mixed or can be readily remixed, the products are compatible.

Once compatibility has been proven, add 1/2 of the required amount of water to the mix tank. Start the agitator running before adding any tank-mix partners. Add tank-mix partners in this order: all products in water-soluble packaging, wettable powders, wettable granules (dry flowables), liquid flowables, liquids, and emulsifiable concentrates. Always allow each tank-mix partner to fully disperse before adding the next product. Maintain sufficient agitation while adding the remainder of the water and writh all of the mixture has been applied.

When using Prentox Diazinon AG500 in tank-mixures, observe all directions for use, crops/sites, use rates, dilution ratios, precautions, and limitations which appear on the tank-mix product's label. Confirm that the tank-mixture is safe to the crop, by spraying a small area first, and evaluating crop safety after an appropriate period. Do not treat larger areas until crop safety has been confirmed.

## **AERIAL APPLICATION**

Avoid application when uniform coverage will not result or when excessive spray drift may occur. Do not allow product to contact animals or unprotected persons.

### CHEMIGATION

# APPLICATION THROUGH AN IRRIGATION SYSTEM (CHEMIGATION)

Prentox Diazinon AG500 may be applied alone or in combination with other pesticides registered for application through sprinkler including center pivot, lateral move, end tour side (wheel) roll, traveler, big gun, solid set or hand move, or drip (trickle) irrigation systems (including surface and subsurface). Do not apply this product through any other type of irrigation system. To insure compatibility, pour the products into a small container of water in the correct proportions. After thorough mixing, let stand for five minutes. If the combination remains mixed, or can be remixed readily, the mixture is compatible.

Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water. If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.

Do not connect the irrigation system used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place. A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments, if the need arises

TTON SYSTEM CONNECTED TO PUBLIC WATER SYSTEMS Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.
 Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, backflow pre-venter (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide intro-duction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

5." The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected a mathematical and the second states and the second states and the second states and the second states are second state

water pressure decreases to the point where pesticide distribution is adversely affected. a material share of the point where pesticide distribution is adversely affected. a material share of the period 5. Engage the chemigation injection or venturi system to add the diazinon to the irrigation lines.

6. Continue to run irrigation system for a few minutes after supply tank is empty to allow material in the irrigation lines to reach the sprinkler heads furthest from the chemigation injection point.

Note: When treatment with Prentox Diazinon AG500 has been completed, further field irrigation over the treated area should be avoided for 48 hours to prevent washing the product off the crop.

Apply Prentox Diazinon AG500 only in sufficient irrigation water to achieve thorough plant coverage. Excess water will wash the product from the plant, resulting in poor control e product from the plant, resulting in poor control.

To avoid a hazard to animals, wells, or adjoining crops, do not allow irrigation water to collect or run off.

FRUIT AND NUT CROPS — REI 24 Hours FRUIT AND NUT CROPS — REI 24 Hours Prentox Diazinon AG500 may be applied using ground or aerial application equipment as specified in the following table. This table indicates the minimum amount of water that can be used for the various methods of application. The rate of Prentox Diazinon AG500 for aerial spray or concentrated spray applied to fruit trees by ground equipment is based on a dilute full cover spray applied with conventional ground equipment at a rate of 300-400 gals. of water per acre. The specific amount of product to be used appears under the separate directions for use for each crop. If the Rate calls for 1 pt. of Prentox Diazion AG500 100 gals. of water, this amounts to 3-4 pts. of product per acre when applied at the usual dilute ground spray volumes of 300-400 gals. of water per acre. In no case should the amount of product used per acre exceed the maximum amount per acre per application that is specified in the Timing/Special Directions for individual crops.

Notes: (1) Soil Incorporation: Following application of this product to control vegetable soil insects, immediately incorporate the product into the soil to the recommended depth (see Timing/Special Directions) using a rotary hoe, cultivator, disk, harrow, or other suitable means. For control of surface cutworms, incorporate 2-3 inches, for subterranean cutworms incorporate 3-6 inches. (2) To Protect Bees: Foliar applications of this product should not be made to com during the pollen shed period.

Стор	Pest	Rate	Timing/Special Directions
Bcets, Red(Tabie)	Cutworms	2-4 qts. per acre	Broadcast just before planting and immediately incorporate into the soil. (See Soil Incorporation Note.)
	Mole Crickets	l qt. per acre	One to two days before plant- ing, broadcast and immediately incorporate into the soil.
	Wireworms	3-4 qts. per acre	Broadcast just before planting and immediately incorporate into the top 4-8 inches of soil.
	Dipterous Leafminers	<sup>1</sup> /2-1 pt. per acre	Apply as insects occur. Repeat application, as necessary, every 7 days. Do not make more than 5 applications per season.
			Do not apply within 14 days of harvest, or illegal residues may occur.
	-		Note: Diazinon will not control organophosphate resistant leafminers.

Precaution: Do not use on Ferns, Poinsettia, Hibiscus, Papaya, Pilea, and Gardenia, aince injury to the plants may occur, when Mimosa Webworms: Mix 1/2 fl. oz. in 3 gals. of water (or 1 pt. in 100 gals. of water) and apply as a thorough foliar sorray when adults first appear. Make a second and third application at 4-5 week intervals.

## PRECAUTIONARY STATEMENTS ORGANOPHOSPHATE 1917 162 HAZARDS TO HUMANS AND DOMESTIC ANIMALS

14

•

1.5

-

2

CAUTION Harmful if swallowed, inhaled or absorbed through skin. Causes moderate eye injury. Avoid contact with skin, eyes, or clothing. Avoid breathing vapor or spray mist. Avoid contamination of food and feed. Food utensils such as tablespoons and measuring cups should not be used for food purposes after use in measuring pesticides. Keep out of reach of domestic animals. Do not use on humans, household pets or livestock. Do not contaminate ornamental fish ponds.

## **Personal Protective Equipment:**

Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category F on an EPA chemical resistance category selection chart. Applicators and other handlers must wear Long-sleeved shirt and long pants, chemical resistant gloves, such as barrier

ninate or viton, and shoes plus socks. Follow manufacturer's instru ions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

# USER SAFETY RECOMMENDATIONS

Users should wash hands before eating, drinking, chewing gum, using tobacco or using the toilet. Remove clothing imme-diately if pesticide gets inside. Then wash thoroughly and put on clean clothing. Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing

# ENVIRONMENTAL HAZARDS

This product is highly toxic to birds, fish and other wildlife. Birds, especially waterfowl, feeding or drinking on treated areas may be killed. Do not exceed maximum permitted label rates. Rates above those recommended significantly increase potential hazards to birds, especially waterfowl. Avoid overlapping of sprays. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in neighboring areas. Shrimp and crab may be killed at application rates recommended on this label. Do not apply where fish, shrimp, crab, and other aquatic life are important resources. Do not contaminate water by cleaning of equipment or disposal of equipment wash waters.

This pesticide is highly toxic to bees exposed to direct treatment or to residues on blooming crops or weeds. Do not apply this pesticide or allow it to drift to blooming crops or weeds if bees are visiting the treatment area.

# PHYSICAL OR CHEMICAL HAZARDS

Do not use, pour, spill, or store near heat or open flame.

# STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage and disposal. Open dumping is prohibited. Pesticide: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. To avoid harming aquatic organisms in rivers and other surface waters, do not pour the concentrate, spray mixture, or rinse water into sanitary drains (for example, toilets, floor drains, and sinks) or into storm water sewers (for example, street drains). If pesticide, spray mixture or rinsate cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representi-The action of the provided institutions contact your state residue of Environmental control agency, or the razzardoux waste representation of the provident of the providence of the state and local authorities. Stay out of smoke from burning container. For minor spills, leaks, etc. follow all precautions indicated on this label and clean up immediately. Take special care to avoid contamination of equipment and facilities during cleanup and disposal of wastes.
