This Concentrate can be used in Mosquito Adulticiding Programs in residential and recreational areas: swamps, marshes, and roadsides, or wherever adult mosquitoes are present in large numbers. Best results are obtained when there is a slight breeze — less than 5 miles per hour. Fog with breeze. Repeat applications as necessary.

FOR TRUCK MOUNTED LECO MACHINE (OR SIMILAR MACHINE): Objective is to treat terrain with 002 to 0025 pounds of Allethrin and 010 to 0125 pounds of Piperonyl Butoxide per acre. Dilute 1 part of this Concentrate with 14 parts (weight) of Oil (such as mineral oil, fuel oil or deodorized kerosene) to give a solution containing 5% Allethrin plus 25% Piperonyl Butoxide. Fog this solution with a discharge rate of 2 to 2.25 fluid ounces per minute, while machine is moving 5 m.p.h. and pressure is set at 3 lbs. per square inch. Discharge nozzle is positioned approximately 30° above horizontal off side of truck bed. Delivery rate and traveling speed can be varied slightly so long as the basis objective of 002 to 0025 pounds actual Allethrin per acre is maintained. Use swath width of 300 feet per acreage calculations.

FOR HUDSON BACK PACK #4712 (OR SIMILAR MACHINE): Strive for same poundage of Allethrin and Piperonyl Butoxide per acre as with LECO. Dilute this Concentrate 1 part, plus 17 parts (weight) of Oil (such as mineral oil, fuel oil or deodorized kerosene) to give a solution containing 67% Allethrin, plus 33.5% Piperonyl Butoxide. Fog this solution at the rate of 7 fluid ounces per acre, based on a 25-foot killing swath. The Hudson Back Pack is carried on the back of the individual treating the area. The individual should walk forward approximately 870 feet during discharge of the 7 fluid ounces. This is roughly at the pace of 2 miles per hour.
