Myt Oil Concentrate #12294-A

For Use by Trained Personnel Only

Approved by U.S.D.A. for use in Federally inspected meat and poultry plants.

Technical*	1.00%
Prentox	2.00%
Diethyl malathion	2.94%
	94.06%
TOTAL	100.00%

*Contains 15-propyl-piperonyl Ether and 0.40% related compounds

Concentrate #12294-A is effective in the control of the below-listed insects if the applicator follows the directions for use as set forth in this label.

Directions for Use (Continued)

SURFACE SPRAY: To control house flies, stable flies, horn flies, horse flies, earwigs, and mosquitoes, dilute 1 part concentrate plus 29 parts of refined kerosene and mix well. Apply as a coarse wetting spray using approximately 1 gallon of spray mixture to 750 square feet of surface. Spray walls, floors, and other surfaces of bins and storage and handling areas thoroughly, being especially careful to treat cracks, crevices and similar hiding places. Treat unloading, loading and processing areas and inside conveying, processing and handling equipment. Spray thoroughly around the base of heavy machinery and equipment. Spray insects directly when possible.

For insecticide protection, clean and spray truck beds, boxcars and shipping containers. Thoroughly treat walls and floors and spray each layer of contents of containers, if not stacked.

INDIAN MEAL MOTHS and ANGIWINDS GRAIN MOTHS: In stored grain, apply to the surface of bins at a rate of 1 gallon per 1,000 square feet. Apply at monthly intervals with the first appearance of moths and continue until the infestation breaks up webbing with the second spraying and make a second application two weeks later.

ANIMAL QUARTER USE: Dilute 1 part concentrate plus 29 parts of refined kerosene and mix well. Apply at the rate of 1 gallon per 1,000 cubic feet of space above the animals. Spray walls, floors, and other surfaces of the treated area and of the animals' quarters. Repeat at least 15 days after treatment.

MUSHROOM PRODUCTION AND PROCESSING: To control MUSHROOM FLIES, dilute 1 part concentrate plus 29 parts of refined kerosene and mix well. Apply at the rate of 1 gallon per 1,000 cubic feet of space above the mushrooms. Spray walls, floors, and other surfaces of the treated area and of the mushrooms' quarters. Repeat at least 15 days after treatment.

FOR USE IN FEDERALLY INSPECTED MEAT AND POULTRY PLANTS: Dilute 1 part concentrate plus 29 parts of refined kerosene and mix well. Apply at the rate of 1 gallon per 1,000 cubic feet of space above the meat and poultry. Spray walls, floors, and other surfaces of the treated area and of the meat and poultry's quarters. Repeat at least 15 days after treatment.

OUTDOOR GROUND APPLICATION (UNDILUTED): To control ADULT MOSQUITOES, dilute 1 part concentrate plus 29 parts of refined kerosene and mix well. Apply at the rate of 1 gallon per 1,000 cubic feet of space above the ground. Spray at a coverage rate of 5 ounces per 100 square feet of area to be controlled. If the equipment is truck mounted, keep the hood to spray no higher than 10 feet above the ground. Do not spray more than 300 feet.

TEMPORARY REDUCTION OF ANNOYANCE FROM FLIES, MOSQUITOES and SMALL FLYING MOTHS OUTDOORS: The above-mentioned application for outdoor ground application will afford temporary reduction of annoyance from these pests in public gathering places, drive-in theaters, golf courses, picnic grounds, playgrounds and recreational areas. Direct application to tall grass, shrubbery and around lawns where these pests may breed or rest, apply while the sun is shining. Applications should be made prior to attendance. Repeat as necessary.

FOR USE ON ANIMALS: To protect beef and dairy cattle, horse and dogs from HORSE FLIES, HOUSE FLIES, MOSQUITOES, and GNATS, dilute 1 part of concentrate plus 29 parts of refined kerosene and mix well. Apply a light mist sufficient to wet the ps of the hair. To control STABLE FLIES, HORSE FLIES, and DEER FLIES on beef and dairy cattle and horses, apply 2 ounces per 100 animal sufficient to wet the hair but not to soak them. Repeat treatment once or twice daily at intervals to give continued protection.

To control the mobile stages of BLOOD SUCKING LICE on beef and dairy cattle, apply the spray to thoroughly wet the hair, use 2 ounces to 100 animal and repeat 2 to 3 weeks as required.
