**DIRECTIONS FOR USE**

Use DURSBAN 1G granular insecticide to control mosquito larvae in non-crop areas that serve as breeding sites for these pests. Apply using any hand operated or ground vehicular mounted gravity or rotary type spreader or seeder or with aerial application equipment that will provide uniform distribution of the granules.

**FLOODED AREA TREATMENT:** Apply uniformly over flood water impoundments whenever mosquito larvae are present. Use DURSBAN 1G at the rate of 2.5 to 5 pounds per acre. This rate is equivalent to 0.025 pound of active ingredient per acre.

**PRE-HATCH TREATMENT:** Many mosquito breeding areas are not covered by water during certain months of the year, yet these areas contain mosquito eggs from which larvae will hatch and grow to maturity when flooding occurs. To control these larvae uniformly apply DURSBAN 1G at the rate of 10 pounds per acre over the known breeding sites prior to the time flooding is expected. This rate is equivalent to 0.1 pound of active ingredient per acre.
