DIRECTIONS FOR USE

Apply DURSBAN 1/2G granular insecticide uniformly to home lawns and other ornamental and recreational turf grass areas using any hand or power operated gravity or rotary type spreader designed for application of granular materials. Treat when insects first appear using DURSBAN 1/2G at the rate of 200 pounds per acre. To help obtain uniform distribution, apply one-half the required amount of product in one direction; then apply the balance at a right angle. Immediately after application sprinkle the turf with 1300 gallons of water per acre so as to wash the granules into the zone of insect infestation. Consult the following table to determine amounts of DURSBAN 1/2G and water needed for smaller sized areas. Re-treat as necessary.

AREA TO BE TREATED	RATES TO USE	
	POUNDS OF DURSBAN 1/2G	GALLONS OF WATER TO SPRINKLE ON TURF AFTER TREATMENT
1000 sq. ft.	5	30
5000 sq. ft.	25	150
10700 sq. ft.	50	325

To control certain white grubs (larvae of European chafer and Japanese beetle) use two to four times the amounts of DURSBAN 1/2G shown in the table. I.e. 10 to 20 pounds per 1000 sq. ft. Apply the granules uniformly over the area treated followed immediately by thorough watering to wash the insecticide into the turf. For best results treat when grubs are young and actively feeding near the soil surface, usually during late July and August. Consult your local Agricultural Extension Service specialist for proper time to treat in your area.

To control Hyperodes (turfgrass) weevils, use twice the rate of DURSBAN 1/2G shown in the table. Treat suspected problem areas in mid-April and again in mid-May. Consult your local Agricultural Extension Service specialist for best time to treat in your area.
