

7/25/67

A residual activity test (described by L. J. Vinson, et al, Soap and Chemical Specialties, February, 1964) was performed on Preview. The method consists of recontaminating stainless steel cups that have already been treated with the disinfectant with a 1/100 dilution of a 24-hour Staphylococcus aureus culture. The length of time that the stainless steel cups are held after contamination until put in letheen broth is four hours and six hours for freshly treated cups and 12 hours for cups that a time lapse of 24 hours or longer has occurred since disinfectant treatment. Ten stainless steel cups are used in each test and the number of positive letheen broth tubes noted after 48 hours at 35° C.

RESIDUAL ACTIVITY OF PREVIEW

<u>Viability Check Following Recontamination at Times Indicated</u>	<u>Number of Positive Tubes Out of Ten</u>
1 Hour	0/10
1 Day	0/10
2 Days	0/10
7 Days	0/10
14 Days	0/10

The use dilution and Phenol Coefficient tests reported above have been confirmed by an independent laboratory and copies of the report are available upon request.

USE OF PREVIEW ON CONDUCTIVE FLOORING

A copy of a report from an independent laboratory is attached showing that Preview is safe for use on conductive flooring. In this application, rinsing is recommended.

CAUTION: KEEP OUT OF REACH OF CHILDREN. Harmful if swallowed. Avoid prolonged skin contact, and avoid splashing in eyes. For eyes, wash immediately with large amounts of water and consult physician.

For hand washing of surfaces, use rubber gloves.

USE DIRECTIONS

For cleaning and sanitizing synthetic pile rugs and carpets, dilute one part of concentrated Wyandotte Sanitizing Shampoo with twelve parts of water (10 oz. per gallon), and apply as a foam, using a commercial-type carpet scrubber. One gallon of this diluted solution is intended to shampoo not more than 85-100 square feet of carpet.

Refer to collateral product bulletin on Wyandotte Sanitizing Shampoo for Synthetic Pile Rugs and Carpets for complete directions.
