Sanex-B

MOTH PROTECTION *for Use In All Drycleaning Systems to be applied during the cleaning process*

ACTIVE INGREDIENTS.....	100%
Aromatic Hydrocarbon Solvent.....	59.0
Diethyldiphenyldichloroethane and related compounds.....	26.1
Tetrachloroethylene.....	14.9

DIRECTIONS FOR USE

THE SOLVENT IN THE ENTIRE SYSTEM MAY BE CHARGED SO GARMENTS CAN BE TREATED AND CLEANED IN ONE ECONOMICAL OPERATION. Check the total amount of solvent in the system, then add 1 pint of Sanex-B to each 25 gallons of solvent. Circulate the charged solvent through the system for a few minutes to obtain a uniform solution. When fresh solvent is added, add 1 pint of Sanex-B to each 25 gallons of new solvent and recirculate.

The active ingredients will be removed by the still. When distillation is constant add 1 pint of Sanex-B to each 25 gallons of distilled solvent that is added to the charged solvent remaining in the system. This can be done after several loads have been run or before beginning the day's operation. Re-circulate the charged solvent in the system when additional Sanex-B is required.

EPA Reg. No. 662-51

WARNING—KEEP OUT OF REACH OF CHILDREN. Contact of skin with solution can cause toxic symptoms. Avoid inhalation and skin contact. In case of spillage on skin, wash immediately with soap and water. Avoid contamination with foodstuffs. Harmful if swallowed. Do not use on pets or humans.

Do not reuse can. Destroy can by perforating or crushing and burying in a safe place away from water supplies.

Sanex-B contains no moisture and is completely soluble in all cleaning solvents.

It can be used in conjunction with soap and sweetener and will pass through the filter in continued operation. A 1/2% solution of Sanex-B is adequate to protect woolen garments from moths for a season's storage or until cleaned again.

For maximum mothproofing results, get extractor up to full speed and shut off. For use in two bath systems: Use 1/2% charge on rinse side.
