DACAMINE 2D/2T is a systemic, residual, broad-spectrum herbicide. It contains the active ingredients 2,4-D and 2,4,5-T. DACAMINE 2D/2T can be used to control a wide range of woody and brushy plants, including blackberry, zinnia, clover, and parsnip. It is a systemic herbicide, meaning it moves through the plant to kill the roots and the foliage. DACAMINE 2D/2T is effective against most broadleaf plants and woody plants. It is generally applied to the foliage of the plants to be killed. It is not intended for use on plants that will be eaten by animals or humans. DACAMINE 2D/2T is not translocated through the plant and will not affect seeds or seedlings. It is not a pre-emergent herbicide and is not effective on actively growing plants. DACAMINE 2D/2T is not recommended for a pre-emergent program to control weeds before planting. DACAMINE 2D/2T is not recommended for use on fields where the crop is to be harvested for seed. DACAMINE 2D/2T is compatible with other herbicides and pesticides. DACAMINE 2D/2T is not recommended for use in combination with other sprays. DACAMINE 2D/2T is not a broad-spectrum herbicide and is not effective against all types of weeds.
