GENERAL INFORMATION

DACAMINE is an oil-soluble water emulsifiable formulation of 2,4-D. It combines the advantages of both the ester and amine forms of 2,4-D. DACAMINE, a non-volatile formulation of 2,4-D, effectively controls broadleaved weeds in lawns and in turf with no vapors or fumes. However, caution should be taken to avoid spray drift to nearby susceptible plants such as ornamentals or shrubbery. DACAMINE's killing action is slower than that of an ester, giving more time for translocation and penetration of weed roots, thus a more complete kill.

A partial list of weeds controlled by DACAMINE are:

Annual chickweed	Curly dock	Mustard
Broadleaf plantain	Field bindweed	Poison ivy
Cockspur	Ground ivy	Puncturevine
Narrowleaf plantain	Henbit	Purslane
Bull thistle	Hoary cross	Ragweed
Buttercup	Knotweed	Shagbark hickory
Canada thistle	Leafy spurge	Wild carrot
Carpetweed	Morning glory	Wild garlic
Chickory	Mintweed	Wild onion

DIRECTIONS FOR USE

LAWNS, PARKS, GOLF COURSE FAIRWAYS, INCLUDING BENTGRASS FAIRWAYS: DACAMINE will effectively control listed common broadleaved weeds in lawns and fairways and similar areas at the rate of 3 to 4 pints in 100 gallons of water or sufficient water to provide uniform coverage per acre. Measure out carefully and mix thoroughly before spraying. NOTE: Bentgrass varieties vary in tolerance to DACAMINE under different conditions of growth. Use rate no higher than 4 pints per acre (3 tablespoons per 1000 square feet) on bentgrass and apply only where experience has shown application to be safe. Injury may result if applied to St. Augustinegrass, centipedegrass, carpetgrass, clovers and Dichondra.

For small lawn areas, excluding bentgrass and above mentioned grasses, add 4 tablespoons (2 fluid ounces) of DACAMINE in four gallons of water per 1,000 square feet. Refer to chart for other dilutions.

Rate (tablespoons)	Area (square feet)	Water (gallons)
1	250	1
2	500	2
4	1,000	4

When to Apply: Best results are obtained when DACAMINE is applied to weeds that are young and actively growing. Do not apply during periods of drought. Fall treatment is advised for control of annual chickweed, a cool weather weed. Repeat applications may be necessary on heavily weed-infested turf. Bare areas may require 3 to 6 weeks. DO NOT apply to areas where turf is dormant or dead. Turf areas until dormant should be watered thoroughly 10 to 15 days before application.

Precautions: Do not apply to areas where turf is dormant or dead. Turf areas until dormant should be watered thoroughly 10 to 15 days before application.

DACAMINE® TURF HERBICIDE

Contains 2 Pounds 2,4-D Acid Equivalent Per Gallon

ACTIVE INGREDIENT:

N-01-yl-1,3-propylenediamine salt of 2,4-Dichlorophenoxyacetic acid*	33.0%
INERT INGREDIENTS:	67.0%
TOTAL	100.0%
*Equivalent to 2,4-Dichlorophenoxyacetic Acid	23.0%

Thoroughly wet all foliage. Apply when weeds are young and actively growing. For control of annual chickweed, a cool weather weed, repeat applications may be necessary on heavily weed-infested turf. Bare areas may require 3 to 6 weeks. DO NOT apply to areas where turf is dormant or dead. Turf areas until dormant should be watered thoroughly 10 to 15 days before application.

DO NOT apply to areas where turf is dormant or dead. Turf areas until dormant should be watered thoroughly 10 to 15 days before application.

CAUTION

Harmful if swallowed or absorbed through the skin. CAUSES IRRITATION OF EYES AND SKIN. DO NOT get in eyes. In case of contact, flush eyes with plenty of water for at least 15 minutes and get medical attention.

DO NOT allow contact with skin or clothing. Wash exposed skin with plenty of soap and water.

DO NOT store near fertilizers, seeds, insecticides, or fungicides.

DO NOT use the same spray equipment for applying other materials to plants; as injury will result.

DO NOT contaminate irrigation ditches, water used for domestic purposes, or waters used by wildlife or aquatic life.

Avoid spray drift to 2,4-D susceptible plants such as cotton, tomatoes, flowers, grapes, fruit trees and ornamentals. Trace amounts of spray drift may cause severe injury to both growing and dormant plants. Coarse sprays are less likely to drift. Spray only on still days with low pressure, coarse spray, and lowered boom.

DO NOT reuse empty container. Destroy by perforating and crushing. Bury or discard in a safe place. DO NOT burn.

WARRANTY AND LIMITATION OF DAMAGES

SELLER warrants that this material conforms to its chemical description and is reasonably fit for the purposes stated on the label when used in accordance with directions under normal conditions of use and BUYER assumes the risk of any use contrary to such directions. SELLER makes no other express or implied warranty of fitness for a particular purpose. BUYER's remedy shall be limited to a refund of the purchase price of the material. SELLER shall not be liable for damages, including consequential damages, in any event shall not be liable for more than the purchase price of the material.

Cameron's Note
