DIRECTIONS FOR BAIT PLACEMENT: The presence of moles is indicated either by network ridges in the turf or (when burrowing deeply) by a series of conical mounds of earth pushed up from below. **SURFACE RIDGES**—To locate active runways crush the ridges at frequent intervals and return the next day to find some of the tunnels reconstructed. Carefully punch a hole in the top of active tunnels, drop in 2 teaspoonsful Mole-End and carefully close the hole. Take care not to again collapse the tunnel or allow loose soil to cover the bait.

DEEP TUNNELS—Remove center plug from the conical mounds with aid of a long-handle spoon and drop 2 teaspoonsful Mole-End bait into the underground tunnel. Close opening with rock or sod. Do not store in or around home.

WARNING: May be fatal if swallowed. Avoid contact with skin, clothing, eyes and foodstuffs. Wash thoroughly after contact. Call a physician immediately in case of accident. Keep out of reach of children and domestic animals. Do not allow domestic animals to graze treated area.
