**DO IT YOURSELF  
ONE SHOT  
HI-Pressure  
INSECT BOMB**

**DIRECTIONS**

**PREPARATIONS** — Close outside doors and windows. Open cabinets and doors to areas to be treated. Shut off fans and air conditioners. Put out all flames and pilot lights. Remove pets and birds, and cover fish aquariums before spraying. Food should be removed or covered during treatment. All food processing surfaces should be covered during treatment or thoroughly cleaned before using. When using the product in these areas, apply only when the facility is not in operation. Use one bomb for each 6,000 cubic foot area. Cover stand, objects that may be sprayed directly, and the floor underneath, to prevent damage to plastic, fabrics, paints, walls, etc. from wet part of the spray.

**DIRECTIONS FOR USE** — Lock valve in open position by pressing arrow on valve button all the way forward until the plastic catch hooks on the lip of the metal rim, locking the spray tip in the spraying position (see Fig. 1). Then set spraying container upright on the stand and LEAVE THE AREA. Keep out of the treated area for at least two hours, then re-enter and open doors and windows and allow to air out for at least 30 minutes before resuming normal activity. Repeat treatment when necessary.

**WARNING** — Contents under pressure. Do not puncture. Do not use or store near heat or open flame. Exposure to temperatures above 120°F may cause bursting. Never throw container into fire or incinerator. Keep out of reach of children.

**ACTIVE INGREDIENTS:**  
Pyrethrins ..... 0.4%  
Technical Piperonyl Butoxide\* ..... 2.0%  
Petroleum Distillates ..... 12.6%

**INERT INGREDIENTS** ..... 85.0%  
\*Equivalent to 1.6% (Butylcarbityl)  
(6-Propylpiperonyl) Ether and 0.4% Related Compounds.
