NET WT. 12 OZ.

### DIRECTIONS

Automatic Aerosol Insecticide is especially designed for Model #747. One unit for each 6,000 cubic feet of space to be treated is recommended. A specific amount of insecticide will be released at the time interval selected. After 2 hours of operation, enough insecticide is suspended in the air to kill a proportion of the flies, mosquitoes or roaches present thereby greatly reducing their numbers. Although one dispenser per 6,000 cubic feet is considered average, other conditions should be considered, as temperature and humidity. Large drafts of forced ventilation may reduce the efficiency. Adjustments should be made in accordance with the above. Contains approximately 3,300 shots. If operating on a 24 hour basis, container should be replaced once a month; 12 hour basis, once every 2 months.
