DIRECTIONS FOR USE

CONVEYOR LUBRICANT MICROBIAL CONTROL

Kathon CL microbicide is recommended for the control of bacteria and fungi in the manufacture and use of water based conveyor lubricants.

METHOD OF ADDITION: Kathon CL microbicide should be dispensed into the conveyor lubricant concentrate and uniformly dispersed throughout the fluid or dispensed into the conveyor lubricant use-dilution feed line using a metering pump and uniformly sprayed onto the conveyor.

FLUID CONCENTRATE: Kathon CL microbicide should be added to the conveyor lubricant concentrate at a level to ensure that the final use-dilution fluid will contain 200-1,000 ppm of Kathon CL microbicide (3-15 ppm of active ingredient).

USE DILUTION FLUID: Grossly contaminated systems must be cleaned before treatment is begun.

INITIAL DOSE: For a noticeably fouled system, meter in 8.3 lbs. (126 fl. oz.) of Kathon CL microbicide per 1,000 gallons of use-dilution conveyor lubricant. If necessary, continue metering 3.3-8.3 lbs. (50-126 fl. oz.) of Kathon CL microbicide per 1,000 gallons of conveyor lubricant until control is achieved and only to maintain the level of Kathon CL microbicide in the final use-dilution fluid at 400-1,000 ppm (6-15 ppm active ingredient).

SUBSEQUENT DOSE: After establishing microbial control or to prevent fouling of a clean system, maintain the system at 3-15 ppm active ingredient by metering 1.7-8.3 lbs. (26-126 fl.oz.) of Kathon CL microbicide per 1,000 gallons of conveyor lubricant.

Kathon CL microbicide weighs 8.4 lbs./gal.
