DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

RECIRCULATING ELECTRODEPOSITION SYSTEMS

Kathon ED microbicide is recommended for the control of bacteria, fungi and algae in recirculating electrodeposition systems and associated rinse systems.

Kathon ED microbicide should be dispensed into the recirculating rinse system, ultrafilter permeate, or final distilled water rinse at a point to ensure uniform mixing.

INITIAL DOSE: When the system is noticeably fouled, add 90-312 ppm Kathon ED microbicide (0.9-3.1 gallons) per 10,000 gallons of fluid in the system. This will provide 10 to 35 ppm of active ingredient. Repeat until control is achieved.

SUBSEQUENT DOSE: When microbial control is evident, add 45 to 134 ppm Kathon ED microbicide (0.45-1.3 gallons) per 10,000 gallons of fluid in the system weekly or as needed to maintain the system. This will provide 5-15 ppm of active ingredient. A change of frequency of treatment may be required depending upon the rate of dilution of the preservative with the makeup fluid, the nature and severity of contamination, level of control required, filtration effectiveness, system design, etc.

Kathon ED weighs 10.4 lbs./gallon.
