**SUPPLEMENTAL TANKSIDE DOSING OF ELECTRODEPOSITION SYSTEM**

If additional microbial control is necessary, Kathon ED microbicide may be added to the electrodeposition system tankside to supplement microbicide incorporated through paint components. If the system becomes noticeably fouled, add 71-248 ppm Kathon ED microbicide (0.7-2.5 gallon per 10,000 gallon of fluid in the system). This will provide 10-35 ppm of active ingredient. Repeat until control is received.

When microbial control is evident, the system can be maintained by addition of 35-106 ppm Kathon ED microbicide (0.35-1.1 gallon per 10,000 gallon of fluid in the system) weekly or as needed. This will provide 5-15 ppm of active ingredient.

NOTE: Regardless of the manner of incorporation, the total active ingredient level in the system should at no time exceed 35 ppm (equivalent to 248 ppm Kathon ED microbicide or 2.5 gallon per 10,000 gallon system fluid).

Kathon ED microbicide weighs 10.8 pound/gallon.
