METHOD OF ADDITION

Kathon ED 1.5% microbicide is a tankside additive for the control of scale, rust, and algae in recirculating electrocoat and associated rinse systems.

Alternatively, Kathon ED 1.5% microbicide may be added through the components of the electrocoat pan prior to their addition to the electrocoat deposition system.

TANKSIDE ADDITION OF ELECTRODEPOSITION SYSTEMS

Kathon ED 1.5% microbicide is a tankside additive for the control of scale, rust, and algae in the recirculating rinse system, permeate, or final distillate point to insure uniform coating.

INITIAL DOSE: When the system is fouled, add 667-2333 ppm (5.6-19.6 gallons per 10,000 gallons in the system). This will provide a level of active ingredient. Recheck and adjust as needed.

SUBSEQUENT DOSE: When the system is fouled, add 333 to 1000 ppm (2.8-8.4 gallons per 10,000 gallons in the system) weekly or bi-weekly. This will provide a level of active ingredient. A check of the rate of dilution of the permeate, the natural makeup fluid, the natural level of contamination, level of scale, and filtration effectiveness, should be made.
