DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

METALWORKING FLUID PRESERVATION
Kathon MWC microbicide is recommended for the control of bacteria and fungi in soluble, synthetic, and semi-synthetic metalworking fluids.

METAL CLEANING FLUID PRESERVATION
Kathon MWC microbicide is recommended as a preservative for use in the manufacture and use of alkaline, acid, and emulsion-based metal cleaning fluids typically used in electroplating, phosphatizing, galvanizing, and general metal-cleaning operations.

HYDRAULIC FLUID PRESERVATION
Kathon MWC microbicide is recommended as a preservative in the manufacture and use of soluble oils, high water-based, and invert-emulsion hydraulic fluids.

METHOD OF ADDITION: Kathon MWC microbicide should be directly dispensed into the concentrate or use-dilution fluid using a metering pump or other point-of-use device, and uniformly dispersed throughout the fluid. Grossly contaminated systems must be cleaned before treatment is begun.

FLUID CONCENTRATE: Kathon MWC microbicide should be added to the fluid concentrate at a level to ensure that the final use-dilution fluid will contain 121-507 ppm of product (4.9-20.5 ppm active ingredient).

USE-DILUTION FLUID
INITIAL DOSE: For a noticeably fouled system, add 5.0 pounds (65 fluid ounces) of Kathon MWC microbicide per 1000 gallons of fluid. If necessary, continue dosing of 1.2 - 5.0 pounds (15.5 - 65 fluid ounces) of Kathon MWC microbicide per 1000 gallons of fluid every 24 hours until control is achieved and only to maintain the level of Kathon MWC microbicide in the final use-dilution fluid at 121-507 ppm (4.9-20.5 ppm active ingredient).

SUBSEQUENT DOSE: After establishing microbial control or to prevent fouling of a clean system, maintain the system at 4.9-20.5 ppm active ingredient by the addition of 1.2-5.0 pounds (15.5-65 fluid ounces) of Kathon MWC microbicide per 1000 gallons of fluid, every 1-3 weeks. Alternatively, add 1.2-5.0 pounds (15.5-65 fluid ounces) of Kathon MWC microbicide per 1000 gallons of makeup fluid. A change in frequency of treatment may be required depending upon the rate of dilution of the preservative with the makeup fluid, the nature and severity of contamination, level of control required, filtration effectiveness, system design, etc.

Kathon MWC Microbicide weighs 9.9 pound/gallon.
