PREVENTION, PESTICIDES AND  
TOXIC SUBSTANCES

AUG 2 1999

Stephen L. Longacre, Ph.D.  
Product Registration Manager  
Ag Chem Regulatory Affairs Dept.  
Rohm and Haas Company  
100 Independence Mall West  
Philadelphia, PA 19106-2399

Subject: EPA Reg. No. 707-232  
Eagle® WSP Turf and Ornamental Fungicide  
Label Amendment  
Your Submission Dated May 18, 1999

Dear Dr. Longacre:

The labeling referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), as amended, is acceptable provided that you:

1. Delete "Ornamental" from "General Use Directions .... Fruits and Vines" on page 11.
2. Replace the single application rate, "2 to 3 oz/100 gal" at a spray rate of 300 gal/A for stone fruits on page 12 with "1.00 to 1.65 oz/100 gal." The latter application rate is equivalent to 1.25 to 2.00 oz/100 gal with a spray rate of 250 gal/A, recommended for a similar product, Rally® 40W (EPA Reg. No. 707-221).

A stamped copy of the draft label is enclosed for your records. Submit one (1) copy of your final printed labeling before you release the product for shipment. Should you have any questions, do not hesitate to contact Dr. S. (Onni) Oonnithan at 703-605-0368.

Sincerely,

*Mary L. Waller*

# EAGLE® WSP

TURF AND ORNAMENTAL FUNGICIDE  
IN WATER-SOLUBLE POUCHES

ACCEPTED  
with COMMENTS  
In EPA Letter Dated:  
AUG 2 1999

<b>ACTIVE INGREDIENT</b>	
MYCLOBUTANIL	
a-butyl-a-(chlorophenyl)-1H-1,2,4, triazole-1-propanenitrile-----	40%
<b>INERT INGREDIENTS</b> -----	60%
<b>TOTAL</b>	<b>100%</b>

Under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, for the pesticide registered under EPA Reg. No. 707-232

EPA REG. NO. 707-232

NOTICE: Before using this product, read the entire Precautionary Statements, Conditions of Sale and Warranty, Directions for Use, Use Restrictions and Storage and Disposal instructions. If the Conditions of Sale and Warranty are not acceptable, return the product unopened within thirty days of purchase to the place of purchase.

## KEEP OUT OF REACH OF CHILDREN WARNING AVISO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail).

### STATEMENT OF PRACTICAL TREATMENT

- IF IN EYES: Flush eyes with a large amount of water for at least 15 minutes. Call a physician if irritation persists.
- IF INHALED: Move victim to fresh air.
- IF ON SKIN: Wash affected skin thoroughly with soap and water.
- IF SWALLOWED: Dilute by giving two glasses of water to drink and call a physician. Never give anything by mouth to an unconscious person.

### PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS WARNING

Causes eye irritation. Harmful if swallowed, inhaled or absorbed through the skin. Do not swallow, get in eyes, on skin or breathe spray mist.

#### Personal Protective Equipment (PPE)

- Applicators and other handlers must wear:
- Long-sleeved shirt and long pants
  - Waterproof gloves
  - Shoes plus socks
  - Protective eyewear
  - Chemical-resistant headgear for overhead exposure

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them.

Follow manufacturer's instructions for cleaning/ maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standards(WPS) for agricultural pesticides [40 CFR 170.240(d) (4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

**User Safety Recommendations**

**Users should:**

- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

**ENVIRONMENTAL HAZARDS**

Do not apply directly to water or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters. Do not apply when weather conditions favor drift or runoff from areas treated.

**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.

For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

**AGRICULTURAL USE REQUIREMENTS**

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 24 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water, is:

- Coveralls
- Waterproof gloves
- Shoes plus socks
- Protective eyewear
- Chemical-resistant headgear for overhead exposure

**NON-AGRICULTURAL USE REQUIREMENTS**

The requirements in this box apply to uses of this product that are not within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses.

Seed treatments and professional applications to lawn grasses, golf courses, industrial (office park), municipal and residential lawns are not within the scope of the Worker Protection Standard.

- Keep unprotected persons out of treated area until sprays have dried.

**STORAGE AND DISPOSAL**

**STORAGE:** Store in a cool, dry area above freezing. The water-soluble pouch may become brittle at storage temperatures below 32°F, but the fungicide is not affected. Do not remove the water-soluble pouches from the container except for immediate use.

**PESTICIDE DISPOSAL:** Do not contaminate water, food or feed by storage or disposal. Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA regional office for guidance.

**CONTAINER DISPOSAL:** Completely empty container into application equipment. Dispose of in a sanitary landfill or by incineration or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

**STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED:** Wear eye protection. Wear protective clothing. Spray water on powder and dust. Scoop or shovel solid material into a suitable container for recovery or disposal. Keep dust to a minimum. Flush contaminated area with a large amount of water to a chemical or sanitary sewer containing a settling pit. Remove contaminated clothing promptly and wash affected skin areas with soap and water. Thoroughly launder clothing before reuse. Refer to Precautionary Statements.

**CONDITIONS OF SALE AND WARRANTY**

Rohm and Haas warrants that the product conforms to its chemical description and is reasonably fit for the purpose stated on the label only when used in accordance with label directions under normal conditions of use. **ROHM AND HAAS MAKES NO OTHER EXPRESS OR IMPLIED WARRANTIES EITHER OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE.** Handling, storage and use of the product by Buyer or User are beyond the control of Rohm and Haas and Seller. Risks such as crop injury, ineffectiveness or other unintended consequences resulting from, but not limited to, weather or soil conditions, presence of other materials, disease, pests, drift to other crops or property or failure to follow label directions will be assumed by the Buyer or User. **IN NO CASE WILL ROHM AND HAAS OR SELLER BE HELD LIABLE FOR CONSEQUENTIAL, SPECIAL OR INDIRECT DAMAGES RESULTING FROM THE HANDLING, STORAGE OR USE OF THIS PRODUCT.**

**GENERAL INFORMATION**

EAGLE WSP turf and ornamental fungicide is a systemic, protectant and curative fungicide recommended for the control of specific diseases mentioned on this label. Optimum disease control is achieved when the fungicide is applied in a regularly scheduled preventative spray program.

**USE RATE DETERMINATION** - Carefully read, understand and follow label use rates and restrictions.

For proper application, determine the size of the area to be treated, the recommended label use rate and the gallonage to be applied to the area. Prepare only the amount of spray solution required to treat the measured area. Careful calibration of spray equipment is recommended prior to use.

**HANDLING** - The enclosed pouches of EAGLE WSP turf and ornamental fungicide are water-soluble. Do not allow pouches to become wet prior to adding to the spray tank. Do not handle the pouches with wet hands or wet gloves. Always reseal overwrap bag to protect remaining unused pouches. Do not remove water-soluble pouches from overwrap except to add directly to the spray tank.

**MIXING PROCEDURES** - Be sure sprayer is clean and not contaminated with other materials prior to use. Fill tank 1/4 to 1/2 full with clean water and start agitation. Be certain that the agitation system is working properly and creates a rolling or rippling on the liquid surface. With the agitator running, drop the required number of unopened water-soluble pouches into the tank. Continue filling tank with the remainder of the water. Always add EAGLE WSP turf and ornamental fungicide into solution prior to adding any additional materials to the tank. Depending on the water temperature and degree of agitation, the pouches should dissolve completely within ten minutes after their addition to water. Keep the spray solution properly agitated to prevent settling.

**COMPATIBILITY** - EAGLE WSP turf and ornamental fungicide is compatible with most commonly used fungicides, insecticides, growth regulators, micronutrients and spray adjuvants. When preparing tank mixes, user should consult spray compatibility charts or State Cooperative Extension Service Specialists prior to actual use.

**NOTE:** EAGLE WSP turf and ornamental fungicide is compatible with boron and spray oils; however, the water soluble pouches must be completely dissolved before adding spray oils or products containing boron to spray mixtures.

**APPLICATION PROCEDURES**

**Ground Equipment:** Application equipment should be properly calibrated and provide a uniform spray coverage.

**Hand or Pressurized Sprayers:** For best control of labeled diseases, achieve thorough coverage of all plant parts on a protectant application schedule.

**Sprinkler Irrigation:** EAGLE WSP turf and ornamental fungicide must be applied on a regular protectant fungicide schedule, *not an irrigation schedule*. Apply only through solid set or hand-move sprinkler irrigation systems. Do not apply product through any other type of irrigation system.

Lack of fungicidal effectiveness can result from nonuniform distribution of treated water. Greatest efficacy is achieved when the application of treated water does not exceed 1/4 inch per acre per application.

If you have questions about calibration, you should contact State Extension Service specialists or equipment manufacturers.

Do not connect an irrigation system used for pesticide application to a public water system unless the pesticide label-~~prescribed~~ safety devices for public water systems are in place.

A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Before applying EAGLE WSP turf and ornamental fungicide through sprinkler irrigation equipment, the chemigation system must meet the following specifications:

- Public water system means a system for the provision to the public of piped water for human consumption is such system that has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.
- Chemigation systems connected to public water systems must contain a functional reduced-pressure zone (RPZ), backflow preventer or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the pipe fill and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.
- Systems not connected to a public water supply must contain a functional check valve, vacuum relief valve, and low-pressure drain appropriately located in the irrigation pipeline to prevent water source contamination from back flow.
- The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
- The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
- The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.
- The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
- Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
- Do not apply when wind speed favors drift beyond the area intended for treatment.

**Specific Instructions for Solid-set and Hand Move Irrigation Equipment:**

- Determine area covered by sprinkler.
- Fill injector solution tank with water and adjust flow rate to use the contents over a 10 to 30 minute interval.
- Determine the amount of EAGLE WSP turf and ornamental fungicide required to treat area.
- Add the required amount of EAGLE WSP turf and ornamental fungicide into the same quantity of water used to calibrate the injection equipment.
- Maintain constant solution tank agitation during the injection period.
- Operate system at normal pressures recommended by the manufacturer of the injection equipment and used for the time interval established during calibration.
- Inject EAGLE WSP turf and ornamental fungicide at the end of an irrigation cycle or as a separate application to maximize foliar absorption and retention.
- Stop injection equipment after treatment is completed. Continue to operate the system until the EAGLE WSP turf and ornamental fungicide solution has cleared the last sprinkler head.

USE DIRECTIONS FOR TURFGRASS

- EAGLE WSP turf and ornamental fungicide should be used in conjunction with turf management practices that promote good plant health and optimum disease control. The key to selecting a fungicide is the proper diagnosis of the organism causing the disease. Diagnostic kits, extension experts, or other identification methods should be used when developing disease control strategies.
- Optimum disease control is achieved when EAGLE WSP turf and ornamental fungicide is applied in a preventative disease control program at a rate of 0.5 to 1.2 ounce per 1000 square feet. See the following table for specific application rates for various diseases.
- EAGLE WSP turf and ornamental fungicide should be applied in sufficient water to ensure thorough coverage. For foliar diseases, use approximately one gallon of water per 1,000 square feet. Two to three gallons of spray solution per 1,000 square feet should be used to control diseases causing root and crown rots.
- Under conditions optimum for high disease development, the spray interval between EAGLE WSP turf and ornamental fungicide applications should be reduced.
- Unless otherwise specified, when disease pressure is high or when used as a curative, use higher rates of EAGLE WSP and shorter intervals. Under light to moderate disease pressure, apply EAGLE WSP at the low use rate and/or longer application intervals.

APPLICATION RATE*					
Disease	Oz. EAGLE per 1000 sq. ft.	Area Covered per water-soluble pouch/sq. ft.	Application Interval/Timing	Instructions	Restrictions
Anthracnose Red Thread Septoria Leaf Spot	0.6	5000	14-21 days	Apply when conditions are favorable for disease development.	<p>Do not apply more than 36 ounces per 5,000 sq. ft. per year (twelve, 3 oz. packets per year).</p> <p>For Nassau and Suffolk Counties in New York State, use is limited to 9 ounces per 5000 sq. ft. per year (1.95 lbs. active ingredient per acre).</p>
Brown Patch	0.6	5000	14 days	Begin applications when conditions are favorable for disease development and before disease symptoms are apparent. If disease is present, mix EAGLE WSP with an EPA registered contact fungicide, such as FORE T/O fungicide. Under conditions of high temperature and humidity, use the shorter spray interval.	
Copper Spot Zonate Leaf Spot	0.6	5000	14 days	Apply when conditions are favorable for disease development.	
Dollar Spot	0.5 - 1.2	2500 - 6000	14 - 28 days	Apply when conditions are favorable for disease development. Make no more than 3 consecutive applications for dollar spot control before rotating to a registered fungicide with a different mode of action.	
Fusarium Blight	0.6 - 1.2	2500 - 5000	14- 21 days	Apply when conditions are favorable for disease development.	
Fusarium Patch (Pink Snow mold)	0.6 - 1.2	2500 - 5000	Fall-Winter	Apply prior to snow cover.	
Leaf Spot Melting-Out Crown Rot	0.6	5000	14 days	Apply when conditions are favorable for disease development.	
Leaf Smuts	0.6	5000	14 days	Apply in the fall after grass enters dormancy and/or in the spring prior to the initiation of growth.	
Necrotic Ring Spot	0.6 - 1.2	2500- 5000	Spring/ 28 days	Make applications on a preventative basis in early to mid-spring.	
Powdery Mildew Rusts	0.6	5000	14-28 days	Apply when conditions are favorable for disease development.	
Spring Dead Spot Necrotic Ring Spot	0.6 - 1.2	2500 -5000	Fall/ 28 days	Make 2 applications beginning in August before the turf goes dormant. Apply 1.2 oz. /1000 sq. feet followed by a second application one month later.	
Summer Patch	0.6 - 1.2	2500 - 5000	14 - 28 days	Begin applications in the spring when conditions are favorable for disease development. Make 2 to 4 applications depending on recommendations from local turfgrass extension experts. Use at least two to three gallons of water per 1000 square feet to increase spray penetration to crown and root areas of plant.	
Zoysia Large Patch	1.2	2500	Fall/ 28 days	Make applications in fall before turf goes dormant.	

\* Each 3 ounce water-soluble pouch (WSP) is equivalent to 0.075 lbs. of active ingredient per 5000 square feet (0.65 lbs. active ingredient per acre).

USE DIRECTIONS FOR LANDSCAPE ORNAMENTALS

EAGLE WSP is a locally systemic fungicide having protectant and curative properties that will translocate onto new growth. For best control of labeled diseases, achieve thorough coverage of all plant parts on a protective application schedule. For dilute applications sprays (≥ 100 gallons per acre) on commercial and residential landscapes, EAGLE WSP turf and ornamental fungicide should be applied at a rate of 3 ounces (one pouch) product per 50-100 gallons of water, unless otherwise directed, and applied on a 10 to 14 day application schedule.

The addition of a nonphytotoxic spreading agent will improve coverage and fungicidal performance. Treated plants should be maintained in a vigorous growing condition. Plants under nutritional or water stress will not respond as well as well-maintained plants. Overdosage of EAGLE WSP turf and ornamental fungicide can result in observable foliar greening, thickened leaves, and/or shortened internodes. If this condition is observed, reduce the fungicide use rate but do not extend the recommended application schedule.

Plant tolerances are acceptable in the specific plants listed on this label. It is not possible to evaluate all ornamental plant species or varieties for tolerance to EAGLE WSP fungicide. The user should test for possible phytotoxic responses by treating a limited number of plants, at recommended use rates, prior to initiating large scale use.

*Note: NOT FOR USE IN COMMERCIAL GREENHOUSES OR NURSERIES.  
NOT APPROVED FOR USE IN NASSAU AND SUFFOLK COUNTIES, NEW YORK*

**RESTRICTIONS**

- Do not apply more than 10 ounces (4 ounces active) per acre per application.
- Do not apply more than 5 pounds (2 pounds active) per acre per year.
- Do not use treated plant materials for food or feed.

**GENERAL USE DIRECTIONS FOR  
ORNAMENTAL (BACKYARD/NON-COMMERCIAL) TREE FRUITS AND VINES  
FOR USE BY PROFESSIONAL APPLICATORS ONLY**

Best control of labeled diseases is achieved when EAGLE WSP turf and ornamental fungicide is applied on a 7 to 10 day application schedule.

EAGLE WSP is a systemic fungicide and does not redistribute after application. Application equipment spray nozzles should be adjusted to apply a uniform spray throughout the entire tree canopy.

The following use recommendations are to be used as guidance in determining the amount of EAGLE WSP to be used per 100 gallons of spray. Refer to specific tree fruit use directions to determine actual use rates for the control of labeled diseases.

**DILUTE, THOROUGH COVERAGE APPLICATIONS:** Dilute thorough coverage applications are based on the amount of spray solution required to thoroughly wet trees until spray run-off.  
The following specific use directions utilizes a 300 gallon per acre dilute basis.

USE DIRECTIONS FOR APPLES

DISEASE	RATE OF EAGLE WSP OZ. /100 GALS.*	USE RECOMMENDATIONS	RESTRICTIONS
Powdery Mildew ( <i>Podosphaera</i> sp.)	2 to 3	Begin application at tight cluster and continue through the second cover spray. Additional sprays beyond second cover may be needed on susceptible varieties or under heavy disease pressure. Use high label rate if powdery mildew was present in previous years.	Do not apply within 14 days of harvest.  Do not apply more than 5 pounds (2 lbs. active ) EAGLE WSP per acre per season.
Rusts ( <i>Gymnosporangium</i> spp.)	2 to 3	Begin applications at pink stage and continue through the second cover spray.	
Scab ( <i>Venturia</i> sp.) Prebloom	2 to 3	Begin application at green tip or when environmental conditions become favorable for primary scab development. Apply EAGLE WSP alone or tank mixed with a protectant fungicide on a 7 to 10 day schedule.	
Bloom, Postbloom	2 to 3	Use EAGLE WSP in a tank mixture with the recommended rate of a protectant fungicide, registered for use on apples, for improved fruit scab and summer disease control	
Postinfection	3	EAGLE WSP provides 96-hour post-infection control or curative activity. Apply as soon as possible after infection period. Follow with a standard preventative spray schedule.	

\*Based on dilute sprays with a 300-gallon per acre basis.

USE DIRECTIONS FOR STONE FRUIT - Applications may be made up to the day of harvest.

CROP	DISEASES	RATE OF EAGLE WSP OZ/100 GALS*	USE RECOMMENDATIONS	RESTRICTIONS
APRICOTS	Brown Rot Blossom Blight ( <i>Monilinia</i> spp.)	2 to 3	Begin application at early red bud stage before infection occurs. If conditions are favorable for disease development, apply again at full bloom and petal fall.	Do not apply more than 2.75 lbs. (1.1 lbs. active) per acre per season.
	Brown Rot ( <i>Monilinia</i> sp.)		Apply 6 ounces (2.4 active) per acre on a 7 to 14 day schedule. Applications should be made when-ever environmental conditions favor disease development during the month prior to harvest.	
	Powdery Mildew ( <i>Podospheera</i> sp.)		Follow brown rot blossom blight schedule making additional applications at 10 to 14 day intervals until terminal growth ceases.	
	Shothole ( <i>Stigmia</i> sp.)		Follow brown rot blossom blight schedule making additional applications at 7 to 10 day intervals as long as needed.	
CHERRIES	Brown Rot Blossom Blight ( <i>Monilinia</i> spp.)		Begin application at early popcorn stage, before infection occurs. If conditions are favorable for disease development, apply again at full bloom and petal fall.	Do not apply more than 3.25 lbs. (1.3 lbs. active) per acre per season.
	Brown Rot ( <i>Monilinia</i> sp.)		Refer to Apricots	
	Powdery Mildew ( <i>Podospheera</i> and <i>Sphaerotheca</i> spp.)		Refer to Apricots	
	Leaf Spot ( <i>Blumeriella</i> sp.)		Follow brown rot blossom blight schedule and continue applications at 7 to 10 day intervals. Make additional applications after harvest.	
NECTARINE	Brown Rot Blossom Blight ( <i>Monilinia</i> spp.)		Begin application at early pink bud stage before infection occurs. If conditions are favorable for disease development, apply again at full bloom and petal fall.	
	Brown Rot ( <i>Monilinia</i> sp.)		Refer to Apricots	
	Powdery Mildew ( <i>Podospheera</i> and <i>Sphaerotheca</i> spp.)		Refer to Apricots	
	Shothole ( <i>Stigmia</i> sp.)		Follow brown rot blossom blight schedule making additional applications at 7 to 10 day intervals as long as needed.	
PEACHES	Brown Rot Blossom Blight ( <i>Monilinia</i> spp.)		Begin application at early pink bud stage before infection occurs. If conditions are favorable for disease development, apply again at full bloom and petal fall.	
	Brown Rot ( <i>Monilinia</i> sp.)		Refer to Apricots	
	Powdery Mildew ( <i>Podospheera</i> sp.)		Refer to Apricots	
	Rust ( <i>Tranzschelia</i> sp.)		Apply 6 ounces (2.4 active) per acre. Begin application approximately 3 weeks after flowering if environmental conditions are favorable for disease development. For optimum disease control, do not apply on an application schedule exceeding 21- days.	
PLUMS PRUNES	Brown Rot Blossom Blight ( <i>Monilinia</i> spp.)		Begin application at green tip, before infection occurs. If conditions are favorable for disease development, apply again at full bloom and petal fall.	Do not apply more than 2.75 lbs. (1.1 lbs. active) per acre per season.
	Rust ( <i>Tranzschelia</i> sp.)		Refer to Peaches	

\*Based on dilute sprays with a 300-gallon per acre bases

**USE DIRECTIONS FOR GRAPES**

Thorough spray coverage is essential for good disease control.  
EAGLE WSP fungicide should be applied in sufficient water to insure adequate coverage.

DISEASES	RATE OF EAGLE WSP OZ. PER ACRE	USE RECOMMENDATIONS	RESTRICTIONS
Anthracnose ( <i>Elsinoe</i> sp.)	3 to 5	Begin application when new shoots are 1 to 3 inches in length and continue on an application schedule which does not exceed 14 days.	Do not apply within 14 days of harvest.
Black Rot ( <i>Guignardia</i> sp.)		<b>Preventative Schedule:</b> Begin application when new shoots are 1 to 3 inches in length and continue applications on an application schedule which does not exceed 14 days. Use higher rate under heavy disease pressure. <b>Postinfection Schedule:</b> Apply within 72 hours after the beginning of an infection period.	
Powdery Mildew ( <i>Uncinula</i> sp.)		Begin application at prebloom (12 to 18 inch shoots) and do not extend applications beyond a 21 day interval. Use higher rate or shorter spray interval on susceptible varieties or under heavy disease pressure.	Do not apply more than 1.5 lbs (0.6 lb. A.I.) per acre per year.
