ROOTICATE

DIRECTIONS

FOR TREATMENT OF PIPES CONNECTING HOMES AND BUILDINGS TO STREET SEWERS, CESSPOOLS AND SEPTIC TANKS - Use one 2 pound package of ROOTICATE per application. Pour one-quarter of the contents in toilet and flush until removed from bowl. Repeat until package is empty. Flush several times to carry ROOTICATE to the soil line outside the dwelling. Always treat during reduced usage and low flow periods of household plumbing facilities.

Higher dosages may be required where serious root trouble exists. One or more repeat doses at monthly intervals may be required to restore free flowing conditions in the sewer. Semi-annual applications after initial treatments are recommended to prevent new root growth from penetrating sewer joints.

Don't expect immediate results since some time is required to kill root cells after treatment.

SEWERS - Twice a year, sprinkle 2 pounds into each junction and terminal manhole. Be careful not to obstruct free flow of sewage.

STORM DRAINS - No constant flow is present, but a period of low flow must be used when applying ROOTICATE into storm drains. Do not apply during heavy storm flow. In dry weather, introduce flow with hose.

Do not reuse this container.
Destroy by burying or burning. Avoid smoke or fumes.

KILLS ROOTS IN

- SEWERS
- SEPTIC TANK LINES
- STORM DRAINS
- THIS SINGLE DOSAGE LASTS SIX MONTHS
- EASIEST TO USE MOST ECONOMICAL

ACTIVE INGREDIENT:

Copper Sulphate Pentahydrate
Inert Ingredients

ROOTICATE eliminates noxious odors and backed up sewers resulting from root clogging.

When used as directed, ROOTICATE reaches to pipe and conduit joints where roots have entered and dissolves slowly there where flow is blocked. The roots absorb the ROOTICATE, are killed, decompose and wash away.

HEALTH AND VIGOR OF TREES AND SHRUBS HAVE NOT BEEN AFFECTED FOLLOWING TREATMENT.

ROOTICATE is safe to use in cesspools and septic tanks. If directions are followed it will not harm the bacteria on which these systems rely for proper functioning.

PRECAUTIONS

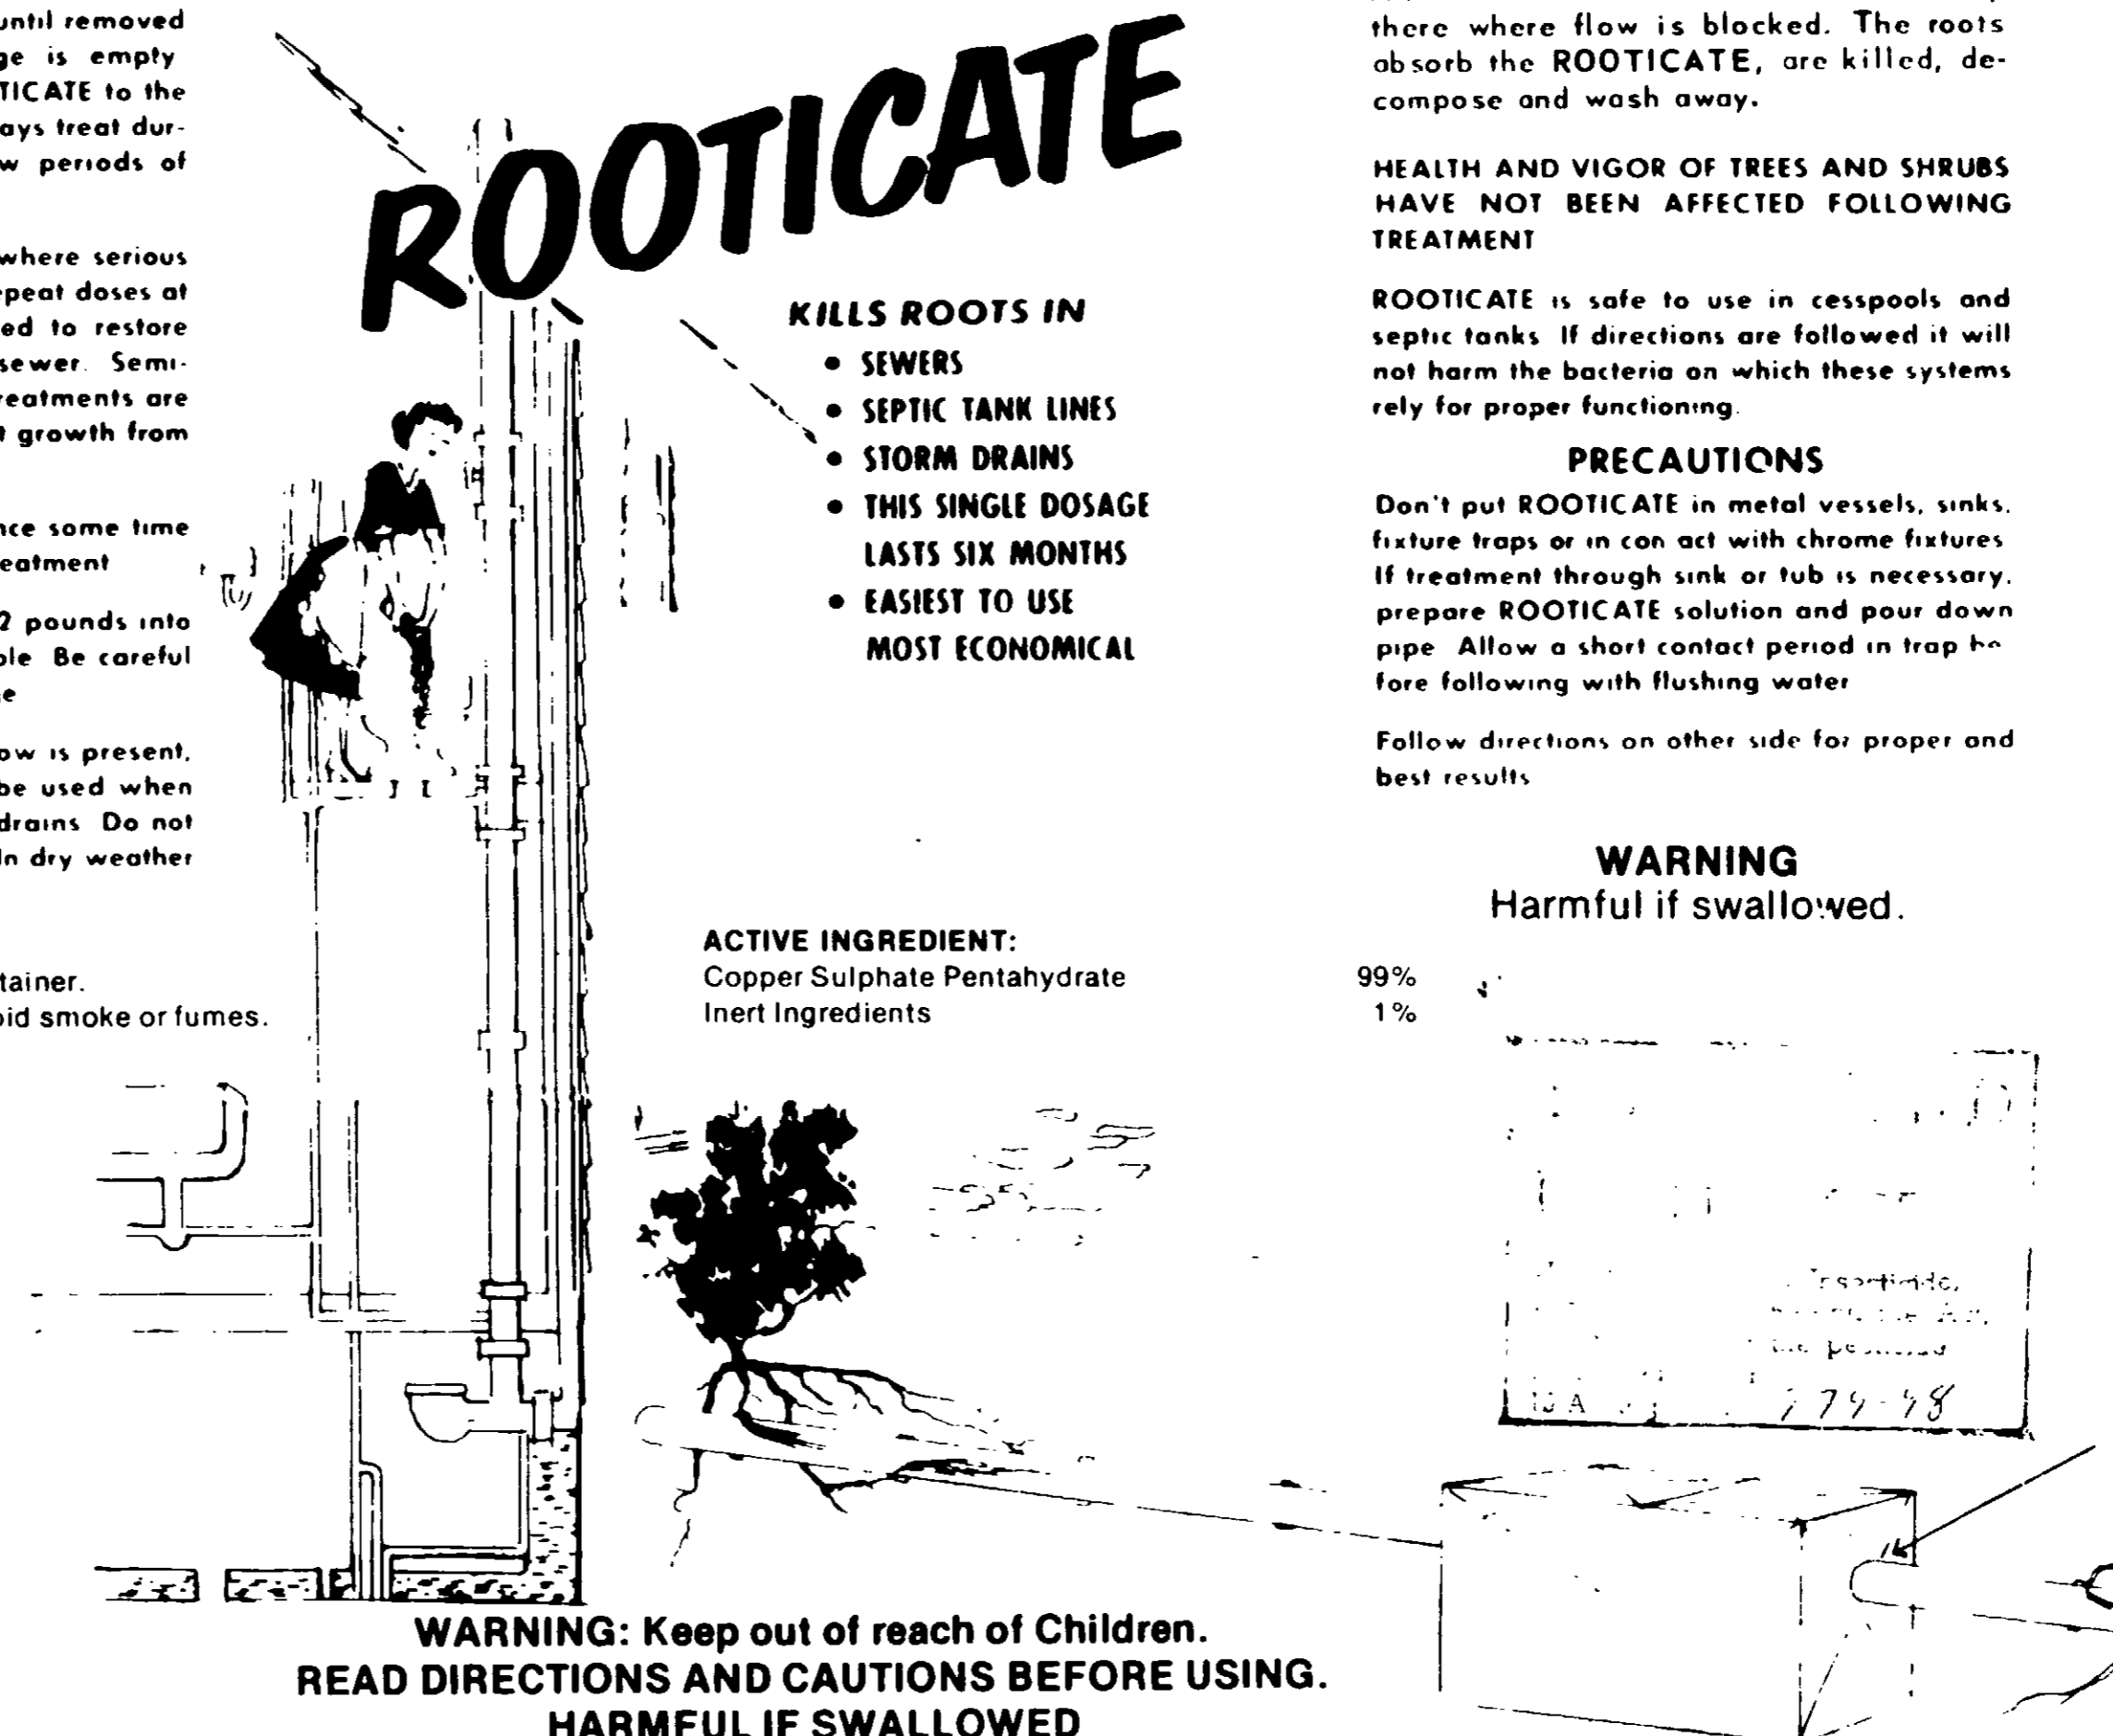

Don't put ROOTICATE in metal vessels, sinks, fixture traps or in contact with chrome fixtures. If treatment through sink or tub is necessary, prepare ROOTICATE solution and pour down pipe. Allow a short contact period in trap before following with flushing water.

Follow directions on other side for proper and best results.

WARNING

Harmful if swallowed.
