Miller's

slug-snail & insect killer bait

Miller's SLUG, SNAIL AND INSECT KILLER BAIT is ready-to-use and remains effective even after rains and sprinklings. Protects flowers, ornamentals and shrubs.

USE DIRECTIONS

1. Be sure area to be baited is damp. In dry weather, water area well before baiting.
2. Apply bait in evening or at night as these pests feed mainly at night.
3. Until under control, bait should be renewed every two weeks, or oftener, for heavy infestations.
4. Pour small piles of bait on the ground in infested areas. Numerous small bait piles are more effective than a few large ones. A level teaspoonful is sufficient for each bait pile. See Special Conditions.
5. Slugs and Snails favor dark, damp places. Bait especially well shaded areas around flowers, rockeries, shrubs, and other ornamentals where these pests stay during daylight hours.
6. Slugs, Snails and certain insects are attracted to the bait. Place bait upwind to the infestation for best results. Upwind is the direction from which the wind is blowing from bait toward pests.
7. Slugs, Snails and certain insects travel or migrate extensively. When invasions from adjacent areas are a probability, a

thin line of Miller's SLUG, SNAIL AND INSECT KILLER BAIT the entire length of the infested areas will provide a barrier and aid in control.

8. To keep bait stations more active, remove dead pests daily.

SPECIAL CONDITIONS

Where there is a particularly heavy infestation, broadcast the bait lightly over the entire area. When used in this manner the bait will give exceptional results but may have to be renewed more often. Repeat applications as needed.

WARNING

Keep out of reach of children

May be fatal if swallowed or inhaled. Avoid breathing dust. Avoid contact with skin, eyes or clothing. Avoid contamination of feed, foodstuffs, water supplies and fish ponds. Do not allow the bait to contact the edible portion of any food or feed crop. Wash thoroughly after using. Keep out of reach of children, pets, poultry and livestock. Protect dogs from treated areas since they may be attracted to this product when applied. Birds feeding on treated area may be killed.
