DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

To reduce Transplanting Shock on Roses, Azaleas, Camellias, Gardenias, Rhododendrons, Shade Trees, Fruit Trees and other Ornamentals balled or in containers.

Use 2 flat teaspoons per gallon of water. Apply to root area as plants are set in planting hole, then cover roots with soil.

Until plants are well established, repeat applications at two week intervals. Apply full strength saturating root area. For 2 to 3 gallons of diluted mixture per gallon depending on size of plant and root area to be treated.

To promote root growth of Annual and Perennial Flowers (bedding plants)

Use 1 flat teaspoon per gallon of water and apply to thoroughly saturate root area at time of planting. Repeat at weekly intervals until plants are well established.

VITA-START is not a stimulant and should not be applied to the plant foliage as a fertilizer or plant food.

HOUSE PLANTS— To stimulate root growth. Use 2 flat teaspoons per gallon of water and apply as follows.

Repotting and planting— Water thoroughly at weekly intervals with diluted mixture until plants are well established.

Established plants— Use at one teaspoon to water plants once a month.
