CASORON GRANULES may be used for weed control on the following edible fruits and nuts:

Apple			Filbert
Blackberry			Grape
Blueberry			Pear
Cherry	j.	· .	Raspberry

Before Application

1. Remove existing weeds.

2. Thoroughly work and smooth the area to be treated.

3. Carefully measure area to be treated and determine the number of square feet.

4. If area to be treated is large, it should be divided into smaller sections and each treated individually.

Application Timing

For annual weeds: Apply in early spring before weeds emerge or after removing weeds. For perennial weeds: For best control, apply after a killing frost from late fall to early winter.

Application and Rate

Shake CASORON GRANULES uniformly on the soil at the rates specified. Rates higher than those indicated may cause injury.

ORNAMENTAL WOODY SHRUBS: Use at rate of 3/4 ounce (2 level tablespoons) for each 10 sq. ft. to be treated. 10 pounds treats 2,133 sq. ft.

FRUIT TREES, NUTS, BLUEBERRIES, GRAPES: Apply 2-3 level tablespoons per 10 sq. ft. Use the higher rate - 3 tablespoons per 10 sq. ft. if weed infestation is heavy or if most weeds are perennial. Wait 30 days after making application before harvesting cherries or nuts.

BLACKBERRIES, RASPBERRIES: Use 2 level tablespoons per 10 sq. ft. Use only on established plantings. Apply before new shoots emerge in spring.

Use the diagram below as a guide for uniform distribution of granules. [DIAGRAM]

More accurate and uniform application can be obtained by applying one-half of the required material over the entire treatment area and repeating the application with the remaining material.

CASORON GRANULES should not be used on sloping areas, because runoff may result in injury to lawn or other plants in adjacent areas.

After Application

1. Unless the soil is wet, sprinkle lightly to moisten the soil 1/4 to 1/2 inch deep. Do not flood, avoid puddling and washing away the granules.

2. Avoid disturbing soil in the treated area as long as weed control is being maintained.
