

71-231572

Apply only as a dilute spray when weather conditions favor good coverage. Do not apply when temperatures are below 40°F. or when freezing or near freezing temperatures or frost will occur within 24 hours. Do not use in combination with sulfur, lime sulfur, captan, folpet, or dichlorone. Do not apply within 7 days of an application of captan, folpet, or dichlorone. Do not apply within 30 days after or 7 days before an application of sulfur or lime sulfur. Do not apply to plants that are under stress from lack of moisture. Add to spray tank when at least 3/4 full. Agitate thoroughly and continue agitation. Do not allow mixture to stand. Do not combine with other spray materials unless prior use of the mixture has proven compatible. If this material or this material in combination with others does not mix or combine properly, do not use. Plant injury may result. Apply to obtain complete and thorough plant coverage.

Table 1. *Estimated values of the parameters of the model for the 1997-1998 season*

the 1990s, the number of people in the United States who are 65 years of age or older is projected to increase from 20 million to 30 million, and the number of people 75 years of age or older is projected to increase from 10 million to 15 million (U.S. Census Bureau, 1996). The number of people 85 years of age or older is projected to increase from 2 million to 4 million (U.S. Census Bureau, 1996). The number of people 90 years of age or older is projected to increase from 500,000 to 1 million (U.S. Census Bureau, 1996). The number of people 95 years of age or older is projected to increase from 100,000 to 200,000 (U.S. Census Bureau, 1996). The number of people 100 years of age or older is projected to increase from 10,000 to 20,000 (U.S. Census Bureau, 1996).

...the fact that the *in vitro* and *in vivo* results are in good agreement, and that the *in vivo* results are in good agreement with the results of the *in vitro* studies.

As a result, the model is able to capture the nonlinear relationship between the variables and the response variable, and it is able to handle the non-normal distribution of the response variable. The model is able to capture the nonlinear relationship between the variables and the response variable, and it is able to handle the non-normal distribution of the response variable.

Figure 1

For the control of Bark Scale on Azalea, Camellia, Scale on Camellia, and Rose Scale on Rose, use 1½ gallons per 100 gallons of water (6 tablespoons per gallon). For Holly scale on Holly, and Cottony Cushion Scale on Pittosporum, use 2 gallons per 100 gallons of water (8 tablespoons per gallon). To control White Peach Scale on Privet and Wax Scale on Pyracantha apply 3 gallons per 100 gallons of water (9 tablespoons per gallon).

For the control of: Cottony maple scale, euonymus scale, European elm scale, European fruit lecanium, European spruce scale, Juniper scale, Magnolia scale, Oystershell scale, Pine needle scale, San Jose scale, Scirpy scale, and Tilia scale. On the following plants: Arborvitae, ash, birch, boxwood, cypress, dogwood, elm, euonymus, juniper, larch, magnolia, maple, mock orange, oak, pine, poplar, spruce, and yew. Use 2 qt. per 100 ft. sq. of surface to be treated. Apply in early morning and repeat every 10 to 14 days.

Net size $4\frac{1}{2}'' \times 11''$
