## DIRECTIONS FOR USE

**INDOOR USE:** For cockroaches, water bugs and silver fish, including those resistant to certain chlorinated hydrocarbon and phosphate insecticides, spray thoroughly into cracks and crevices, under and behind sinks, cupboards, drawers, woodwork, refrigerators, pipes and drains, and in all cracks and crevices where insects may hide. Spray on garbage and garbage containers. Spray directly on as many insects as possible. It is important to find places where insects hide and treat these places well. Rooms and houses can be free of roaches with thorough and repeated applications of RIB-72 Residual Insect Spray. Spray residues kill insects up to two weeks after the spray deposit has dried. Do not spray foodstuffs or growing plants. Do not allow children to contact treated surfaces until surfaces are completely dry.

**INDOOR USE:** For ants, crickets, spiders, scorpions, saw-toothed grain beetle (exposed stage), spray with a wetting spray similar to that given for roaches above. Treat ant trails and areas around doors and window frames where insects enter premises.

**OUTDOOR USE:** Ants, clover mites, crickets, ear wigs, fleas, millipedes, sowbugs, and brown dog ticks: Spray infested areas thoroughly including outside surfaces of screens, doors, window frames, foundations, patios, or other places where insects may enter. For ants, spray hills and runways. Repeat as necessary. Do not spray vegetation.
