STATEMENT OF PRACTICAL TREATMENT

IF SWALLOWED:

Call a physician or Foison Control Center immediately.

Gastric lavage is indicated if material was taken

internally. DO NOT INDUCE VOMITING: vomiting may cause

aspiration pneumonia.

IF INHALED:

Remove person from spray area. Call a physician.

Wash promptly with soap and water.

IF ON SKIN:

IF IN EYES:

Flush eyes with plenty of water. Get medical attention.

PRECAUTIONARY STATEMENTS HARZARDS TO HUMANS (AND DOMESTIC ANIMALS)

CAUTION

Harmful if swallowed. Contact with skin can cause toxic symptoms. Avoid breathing spray mist and skin contact. Do not contaminate water, feedstuffs or food by storage or disposal.

ENVIRONMENTAL HAZARDS

This product is highly toxic to fish, birds, and other wildlife. Keep out of lakes, streams or ponds. Do not contaminate water by cleaning of equipment or disposal of wastes. Apply this product only as specified on this label.

PHYSICAL OR CHEMICAL HAZARDS

Do not use, pour, spill or store near heat or open flame.

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

STORAGE AND DISPOSAL

STORAGE:

Keep out of reach of children and pets.

DISPOSAL:

Pesticide--Pesticide spray mixture or rinsate that can not be used should be disposed of according to procedures approved by Federal, State, or local disposal authorities. Open dumping is prohibited. Container -- Do not reuse empty container. Wrap container and put in trash collection.

NON-PROFESSIONAL USERS

SUBTERRANEAN TERMITES: Use a soil drench or spray in a water emulsion. To prepare the mixture use 11 tablespoons of Chlordane to make one gallon of : . . solution or 3 gallon of Chlordane to make 11 gallons of solution (3 gal. of " Chlordane and 10 gal. of water). Prepare the solutions by placing g of the water in a container, add the correct amount of Chlordane and then add the rest of the water and mix thoroughly.

First remove all wood debris and wood forms. Around piers, pipes, chimney bases and along foundations of poured concrete dig a trench 6 inches wide and 4 inches deep. For brick and block foundations dig the trench about 12 inches deep. If footing is more than 12 inches deep, make holes with a crowbar, pipe or a rod about one foot apart that extend from the trench bottom to the top of the footing. Make holes closer in hard-packed clay soils. NEVER DIG BELOW THE TOP OF THE FOOTING. Apply the emulsion (or solution) in the trench at a rate of 4 gallons per 10 linear feet per foot of depth. Apply half of this to the back-fill. Likewise, treat along the inside of foundations of crawl-space buildings. Cover treated soil with a thin layer of untreated soil.

For raised proches, terraces, and entrance slabs, drill holes at one foot intervals, 6 inches from the foundation, and pour one-half gallon of enulsion (or solution) into each hole. Refill holes. Slabs with heat ducts or radiating heat pipes should be treated by commercial pest control operator.

The object is to establish a treated soil barrier which will prevent termite entry. Other critical areas may also require treatment, particularly if there are inaccessible areas, basements or slab-type construction. It is suggested that you contact the Agricultural Cooperative Extension Service for advice or consult a Commercial Pest Control Service.

Avoid contamination of public and private water supplies by following these precautions. Do not allow a hose or any type of faucet extension to reach into the termite chemical solution while filling or mixing this material with water. Use anti-back-flow or anti-siphonage equipment on all filling equipment. These devices can be purchase at hardware or plumbing supply stores. Use of anti-back-flow equipment will help to insure that the user of this toxic chemical will not contaminate domestic water supplies. Refer to Federal (Federal Housing Administration), state, and local specifications for safe distances of treatment areas from wells. Soil in the vicinity of wells, cisterns or ponds should not be treated if it is water saturated, subject to excessive saturation due to an accumulation of water or if the soil to be treated around the perimeter of the structure is at a grade lower than surrounding yard or property area. If this is the situation treat as follows: DO NOT APPLY UNDER PRESSURE. Soil should be removed to an area safe from well or domestic water contamination, treated, allowed to stand undisturbed for two to four hours then returned to the trench which has been lined with 4 mil. plastic sheeting. Be careful not to puncture the plastic sheeting when returning soil to the trench. Do not treat structures that contain cisterns or wells.
