EMULSIFIABLE CONCENTRATE

INSECTICIDE FOR USE ONLY BY PROFESSIONAL APPLICATORS

ACTIVE INGREDIENTS:	
*Technical Chlordane	2.0%
Petroleum Distillate	21.0%
INERT INGREDIENTS	7.0%
Total	100.0%

*Equivalent to 43.2% Octachloro-4, 7-methanotetrahydroindane and 28.8% related compounds. Contains 8.0 lbs. active chlordane per gallon

KEEP OUT OF REACH OF CHILDREN

WARNING

STATEMENT OF PRACTICAL TREATMENT

If swallowed Call a physician immediately. Gastric lavage is indicated if material was taken internally. DO NOT INDUCE VOMITING unless other treatment is not available. Vomiting may cause aspiration pneumonia. If it is necessary to induce vomiting, give victim one or two glasses of water and insert finger in back of throat. Repeat until vomit fluid is clear. Do not induce vomiting or give anything by mouth to an unconscious person. **If on skin**—Wash with soap and water. **If in eyes**—Flush with water for 15 minutes. Contact a physician. **If inhaled**—Remove victim to fresh air and support rest as indicated.

SEE SIDE PANEL FOR ADDITIONAL PRECAUTIONARY STATEMENTS.

g walls) especially where the wall is con-
floor. Application may also be necessary
nduits or any cracks in the basement floor
manner that will allow for application of a

Outside Perimeter

Application shall be made by trenching and/or rodding from grade or from the bottom of a shallow trench to the top of the footings in a manner that will allow for application of a chemical barrier. Rod holes should not extend beneath the top of the footings.

A trench need not be wider than 6 inches. Rod from the base of a shallow trench to the top of the footings. Low pressure spray may be used to treat soil which will be replaced in the trench. Mix the emulsion with the soil as it is being replaced in the trench. Cover the treated soil with a layer of untreated soil.

Hollow Masonry Units of the Foundation and or Basement Wall (below grade)

Treat so as to make a continuous chemical barrier in the voids. Apply the emulsion at the rate of 2 gallons per 10 linear feet. Apply the emulsion so it will reach the footing.

Crawl Spaces

Apply the emulsion at the rate of 4 gallons per 10 linear feet per foot of depth from the grade to the top of the footing. For example, a footing 3 feet deep would require 12 gallons of emulsion per 10 linear feet. Application must be made by rodding and or trenching.

Treat both sides of foundation and around all piers and pipes.

When rodding from grade or from the bottom of a shallow trench, rod holes should be spaced in a manner that will allow for application of a continuous chemical barrier. Rod holes should not extend beneath the top of the footings.

A trench need not be wider than 6 inches. Rod from the base of a shallow trench to the top of the footings. Low pressure spray may be used to treat soil which will be replaced in the trench. Mix the emulsion with the soil as it is being replaced in the trench. Cover the treated soil with a layer of untreated soil.

Hollow Masonry Units of the Foundation

Treat so as to make a continuous chemical barrier in the voids. Apply the emulsion at the rate of 2 gallons per 10 linear feet. Apply the emulsion so it will reach the footing.

RETREATMENT RESTRICTIONS

Retreatment for subterranean termites shall only be made when there is evidence of active termite infestation subsequent to the initial treatment, or there has been a mechanical break in the chemical barrier applied to the soil.

STORAGE AND DISPOSAL

Prohibitions

Do not contaminate water, food or feed by storage, disposal or cleaning equipment. Open dumping is prohibited.

Pesticide Disposal

Pesticide spray mixture or rinsate that cannot be used or chemically reprocessed should be disposed of in a landfill approved for pesticides or buried in a safe place away from water supplies.

Container Disposal

For less than 30 gallons: triple rinse and offer for recycling, reconditioning or disposal in approved landfill or bury in a safe place. For 30 gallons or larger: reseal container and offer for reconditioning OR triple rinse and offer for recycling, reconditioning or disposal in an approved landfill or bury in a safe place.

General

Consult federal, state or local disposal authorities for approved alternatives.
