DIRECTIONS FOR USE

This product can be used in wet or damp locations such as river banks, railroad tracks, loading areas, in or around rat holes, under granaries, along fences, garbage dumps, etc.

All outdoor placements must be made in tamperproof boxes.

This product is equally effective in dry areas such as the insides of buildings and other protected areas.

Place baits in tamperproof bait stations along walls, in corners, and in concealed locations where rats can feed undisturbed.

Bait placements should be checked daily to make sure that an uninterrupted supply of bait is available. Maintain an uninterrupted supply of bait for at least 15 days. Continue baiting until all signs of feeding have stopped.

Place baits 20 to 30 feet apart. At least 4 ounces of bait should be used per location.

Bait placements should be kept permanently to prevent new infestation.

CONTAINER DISPOSAL

Do not reuse empty container. Destroy by perforating or crushing. Bury or discard in a safe place.

IMPORTANT

For best results, keep this product in a closed container, free from odors which may contaminate the bait and reduce acceptability.

Rodents may feed several times before the effects are noticed. Several days may be required for death to occur.
