DIRECTIONS

Skin application for mosquitoes, biting flies, gnats, and fleas-- Hold unit 4 to 6 inches from the skin of arms or legs while applying with a slow sweeping motion until surface is slightly moistened. Rub with hand to insure even distribution. To apply to face and neck, spray in palm of hand in short bursts and spread on the skin. Apply with caution around eyes and mouth. DO NOT SPRAY DIRECTLY ON FACE.

ACTIVE INGREDIENTS:

N,N-Diethylmetatoluamide	71.25%
Other diethyl toluamides	3.75%

INERT INGREDIENTS:

Dichlorodifluoromethane	25.00%
	100.00%

RIGHT PANEL:

DIRECTIONS

Clothing treatments against biting insects, chiggers (mites) and ticks -- Treat shirt, trousers, and socks by holding unit 6 to 8 inches from the clothing while applying with a slow sweeping motion. Continue operation until surface is slightly moistened; saturation should be made where bites occur, such as across the shoulders and along the thighs. For ticks and chiggers, liberal application should be made along the openings of clothing, such as inside the neck band, and the fly and cuffs of trousers, and tops of socks. A thorough application required is 3 to 4 ounces of material or 3 to 4 minutes spraying time. Against mosquitoes, biting flies, fleas, and chiggers, one application is effective for a week if repellent is not washed away, and against ticks for 3 to 4 days. Clothing may be treated several days before wearing. If irritation develops, discontinue wearing treated clothing.

CAUTION: This material affects lacquer, paint, certain plastic articles, and some synthetic fabrics. Avoid treating goggles, watch crystals, painted helmets, etc. harmful if swallowed. Avoid contact with eyes and lips. Keep out of reach of children.
