

DIRECTIONS FOR DORMANT SPRAYING

(Before new growth starts)

A miscible superior oil spray for use in control of certain over-wintering insects on apple, peach, pear, plum and cherry trees — grapevines — blueberry, raspberry and blackberry bushes — also roses, shade trees, evergreens and ornamental shrubs.

Add required amount of material to water and mix thoroughly. Stir well before using and occasionally while using to assure uniformity of spray. Apply to thoroughly wet all plant surfaces in the dormant or delayed dormant period when the temperature is above 40° and there is no danger of freezing before the spray dries.

For San Jose scale, cottony maple scale, European red mite, red spider, leaf roller, larch case-bearer and mealy bug use 1 to 50 dilution (2.5 fl. oz. or 5 tablespoonfuls per gallon of water).

For oyster shell scale, scurfy scale and tulip scale use 1 to 33 dilution (3.9 fl. oz. or 8 tablespoonfuls per gallon of water).

For spruce gall scale, mites and red spider on conifers, spruce, pines and evergreens, including broad-leaved evergreens use 1 to 50 dilution (2.5 fl. oz. or 5 tablespoonfuls per gallon of water).

Scalecide meets the specifications of

New York State's 60 vs. 60
