

DIRECTIONS

Outdoor area control of MOSQUITOES, FLIES, and GNATS.

Dilute at the rate of 7 gallons of concentrate in 93 gallons of water or #2 Fuel Oil. Apply in accordance with the equipment manufacturer's recommendation.

Thermal Fog and Mist Blower machines produce fine spray particles which hang over the ground, penetrating the areas occupied by adult mosquitoes. Thermal or mist fogging with this concentrate will kill adults on contact. For outdoor area control of mosquitoes and similar small flying insects, envelop the area to be treated in a fine fog. Avoid over-spraying of ornamental and native plants to minimize the phytotoxicity of the oil carrier. Follow the sprayer manufacturer's directions for an even penetration of fog at a rate not to exceed 2 gallons per acre. For best results fogging should be done during the cooler hours of the night or early morning and when the wind is not in excess of 3 miles per hour. Timing should coincide with the greatest mosquito activity. Repeat as necessary.

MOSQUITO LARVAE

For MOSQUITO LARVAE in standing water, apply Pratt's Oil Base ML Fog Spray Concentrate at the rate of 16-17 fl. ozs. per acre. Mix with sufficient oil to assure even coverage.

Keep out of fish-bearing bodies of water

NET CONTENTS: 5 GALLONS

FOR USE IN FOGGING EQUIPMENT TO KILL FLIES, MOSQUITOES, AND GNATS

Contains LETHANE[®] 384 and MALATHION

ACTIVE INGREDIENTS

Beta butoxy beta thiocyno diethyl ether
Malathion*

INERT INGREDIENT

Total

*O, O—dimethyl dithiophosphate of diethyl mercaptosuccinate

®Lethane is a trademark Reg. U. S. Pat. Off.
