DISPENSING BAG U. S. PATENT NO. 3,494,333

ZIPCIDE CATTLE DUST BAG

ZIPCIDE IS REG. TM IN U.S. PATENT OFFICE
BY BALCOM CHEMICALS, INC.

U. S. Patent No. 2,748,146;
Canadian Patent No. 502,206
EPA Registration No. 960-169-134

*CO-RAL is Reg. TM in U. S. and Canadian
Pat. Offs. by Farbentfabrik Bayer A. G.,
Chemurg Corp. Licensee

* Contains CO-RAL® (or coumaphos)

GUARANTEE

ACTIVE INGREDIENT:
O,O-Diethyl O-13-chloro-4-methyl-2-azo (2H)-1-benzox-
pyran-7-yl phosphorothioate 1%
INERT INGREDIENTS: 99%
100%

CAUTION
KEEP OUT OF REACH OF CHILDREN

See right panel for caution statements

NET WEIGHT 10 POUNDS

DIRECTIONS FOR USE

IMPORTANT: Read these entire Directions and Conditions of Sale, including the Warranty and Limitation of Damages provision, before using ZIPCIDE CATTLE DUST BAGS.

CONDITIONS OF SALE: These Directions for Use reflect the opinion of experts based on tests of effectiveness, of toxicity to laboratory animals and of residues on or in food and feed under normal conditions of use. However, because of the wide range of conditions under which this product may be used, even though label directions are followed, it is impossible to eliminate all risks associated with its use because of abnormal conditions beyond the control of the seller, Hess & Clark and the Seller offer, and the Buyer uses, this product subject to the understanding that the Buyer assumes all such risks.

LOUSE AND HORN FLY CONTROL

Suspend ZIPCIDE CATTLE DUST BAG in areas frequented by cattle or in gateways or lanes through which the animals pass daily for water, feed or mineral. Dust bags may also be suspended in loading sheds or in front of protected mineral feeders.

FOR LACTATING DAIRY COWS, ZIPCIDE CATTLE DUST BAGS may be suspended in the stall through which cows leave the milking barn. In all cases, the dust bags should be adjusted so that the bottom of the bag will hang level to six inches below the top of the stall.

LOUSE AND HORN FLY CONTROL AND AS AN

AID IN REDUCING FACE FLY POPULATIONS

Suspend ZIPCIDE CATTLE DUST BAG in the same manner as described under "Louse and Horn Fly Control" except as follows: (1) The bags should be hung low enough to insure that the faces of the cattle will be dusted. (2) The bags must be located so the

animals will be forced to use them daily. As face flies are able to travel over an area of several miles, hard results are not being seen. Face fly populations are at lowest when ZIPCIDE CATTLE DUST BAGS are used on an area wide basis.

INSTALLATION OF ZIPCIDE CATTLE DUST BAG

Suspend the dust bags by inserting rope, chain, or wire through the grommets at the top of the bag and attaching to an overhead structure, or by hooking the grommets into hooks fixed to a stationary overhead 2 x 4 at the heights recommended for louse and horn fly or face fly control. Rope, chain or wire can also be tied or attached to two posts or other fixed points with the dust bag hanging in the center. When dust bags are provided on a free-choice basis, allow one 10 pound ZIPCIDE CATTLE DUST BAG per 10 to 20 animals. After the bags are in place, pull the rip cord to allow the insecticide to release from the silver bottom.

RESTRICTION: Do not hang Cattle Dust Bag over feed, mineral or water troughs.

CAUTION: KEEP OUT OF THE REACH OF CHILDREN! Harmful if inhaled or absorbed through the skin. Do not get in eyes or on skin. Do not contaminate food or feed. Destroy damaged or worn out dust bag by burning or burying. Stay away from smoke or fumes. Do not breathe dust. Wash after handling. If poisoning occurs, obtain prompt medical aid. Prolonged exposure will result in cholinesterase depression.

TO PHYSICIAN: Atropine sulfate is antidote. 2 P.M. is also antidote and may be administered in conjunction with atropine. This product is toxic to fish, birds and other wildlife. Do not contaminate water by cleaning of equipment or disposal of wastes. Apply this product only as specified on this label.
