- DIRECTIONS -

10% Granular Chlordane broadcasts easily in a Fertilizer Spreader, settles quickly to the soil and will not dust.

LAWNS AND TURF - To control Japanese Beetle Grubs, Lawn Ants, Mole Crickets, and White Grubs - Use 2½ lbs. Chlordane Granular per 1000 sq. ft. of lawn. Apply approximately 2 weeks before beetles emerge in your area. Also apply on lawns that are in full. Liberal watering after application carries the poison into the soil and spreads it.

NOTE - Keep children and animals out of treated areas until the material has been thoroughly washed into the soil and the surface is completely dry. Do not graze treated area.

ANTS AND ROACHES: (Outdoor use only) - Apply Chlordane 10% Granular to cracks, tunnels, burrows, and nests where pests multiply and travel. Repeat applications as necessary.
