Comments

DIRECTIONS

LEBANON WEED SPRAY destroys many common weeds without injury to most permanent grasses. A single application when weeds are in vigorous growth will improve the appearance of your lawn. Apply in spring, summer and fall for a weed-free lawn. Do not use on Bent grass or any young grasses in seedling stage. White clover can be severely damaged or killed.

Chickweed, Dandelion, Ground Ivy, Henbit, Pennywort, Plantain, Buckhorn, Clover, Cinquefoil are usually killed with one application. Minimize failures by accurately covering 800 sq. ft. with 4 tablespoonsful mixed with sufficient water. Usually 1 gallon of water is sufficient to cover 800 sq. ft., however, more water can be used.

Thistle, Dock, Bindweed, Garlic, Black Medic, Spotted Spurge, Wood Sorrel, Knotweed, Poison Oak and Poison Ivy may need several applications at two week intervals.

CAUTION

Harmful if swallowed. Avoid contact with skin, eyes and clothing. In case of contact, flush with plenty of water; for eyes, get medical attention.

Vapors from this product may injure susceptible plants in the immediate vicinity.

Avoid spray drift to susceptible plants such as: garden vegetables, flower beds, shrubbery and other ornamentals. Coarse sprays are less likely to drift. Do not apply on or near desirable trees or in locations where chemical may be washed or moved into contact with their roots. St. Augustine Grass, Carpet Grass and Dichondra may be injured.

This product is toxic to fish. Keep out of lakes, streams and ponds.

Do not apply when weather conditions favor drift of spray from areas treated.

Do not use same sprayer for other purposes unless you thoroughly clean spray equipment with suitable chemical cleaner. Do not store near fertilizer, seeds, insecticides or fungicides.

Do not use, pour, spill or store near heat or open flame.

Do not reuse container. Destroy when empty.
