Note: Changes in labeling differing in substance from that accepted in connection with this registration must be submitted to and accepted by the Registration Division prior to use of the label in commerce. In any correspondence on this product always refer to the above EPA registration number.

On the basis of information furnished by the registrant, the above named pesticide is hereby registered/reregistered under the Federal Insecticide, Fungicide and Rodenticide Act. Registration is in no way to be construed as an endorsement or recommendation of this product by the Agency. In order to protect health and the environment, the Administrator, on his motion, may at any time suspend or cancel the registration of a pesticide in accordance with the Act. The acceptance of any name in connection with the registration of a product under this Act is not to be construed as giving the registrant a right to exclusive use of the name or to its use if it has been covered by others.

The basic and alternate #1 formulations (dated 6/22/2011) are acceptable.

This product is registered in accordance with FIFRA section 3(c)(5) provided that you:

- 1. Submit and/or cite all data required for registration review/reregistration of your product when the Agency requires all registrants of similar products to submit data.
2. Make the following label revision:
a. Revise "EPA REG. NO.961-URO" to "EPA REG. NO. 961-419."
b. Assure that the establishment number and net contents are also added to the final printed label.

NOTE: Should you wish to add/retain a reference to the company's website on your label, then please be aware that the website becomes labeling under the Federal Insecticide Fungicide and Rodenticide Act and is subject to review by the Agency. If the website is false or misleading, the product would be misbranded and unlawful to sell or distribute under FIFRA section 12(a)(1)(E). 40 CFR 156.10(a)(5) list examples of statements EPA may consider false or misleading. In addition, regardless of whether a website is referenced on your product's label, claims made on the website may not substantially differ from those claims approved through the registration process. Therefore, should the Agency find or if it is brought to our attention that a website contains false or misleading statements or claims substantially differing from the EPA approved registration, the website will be referred to the EPA's Office of Enforcement and Compliance.

- 3. Submit one (1) copy of the revised final printed label for the record.

Environmental Hazards

This pesticide is toxic to fish and aquatic invertebrates and may adversely affect non-target plants. To protect the environment, do not allow pesticide to enter or run off into storm drains, drainage ditches, gutters or surface waters. Applying this product in calm weather when rain is not predicted for the next 24 hours will help to ensure that wind or rain does not blow or wash pesticide off the treatment area. Sweeping any product that lands on a driveway, sidewalk, or street, back onto the treated area of the lawn will help to prevent run off to water bodies or drainage systems.

This chemical has properties and characteristics associated with chemicals detected in groundwater. The use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination. Application around a cistern or well may result in contamination of drinking water or groundwater.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

- Do not apply this product in a way that will contact any person or pet, either directly or through drift. Keep people and pets out of the area during application. Do not allow people or pets to enter the treated area until dusts have settled.

[OPTIONAL HEADING:] [INSTRUCTIONS:] [USE INSTRUCTIONS:] [APPLICATION DIRECTIONS:] [APPLICATION INSTRUCTIONS:] [TURF Fertilizer Broadleaf Plus Dimension or This product] is formulated [designed] to provide control of most annual grasses and certain broadleaf weeds* commonly found in home lawns.

[TURF Fertilizer Broadleaf Plus Dimension Weed Control or This product] contains three components: a preemergent herbicide, a lawn fertilizer, and a post emergent broadleaf weed* killer.

- The preemergent herbicide can be applied to established turfgrass to control crabgrass goosegrass, foxtails, and other undesirable annual grasses.
- The fertilizer contains [slow release] nutrients [that may extend the availability] for turfgrass uptake.
- The post emergent broadleaf herbicide will control over 250 lawn weeds* including dandelion, chickweed, thistle and clover. A [partial] list of broadleaf weeds is presented on this label.

WHERE TO USE

[TURF Fertilizer Broadleaf Plus Dimension Weed Control] may be used on the following established turf species:

Established Cool Season Turfgrass:

- Kentucky bluegrass
- perennial ryegrass
- fine fescues
- tall fescue

Established Warm Season Turfgrass:

- bahiagrass
- bermudagrass
- buffalograss
- zoysiagrass

Do not use [TURF Fertilizer Broadleaf Plus Dimension Weed Control or this product] on dichondra, carpetgrass or colonial bentgrass. Do not use [TURF Fertilizer Broadleaf Plus Dimension Weed Control or this product] on St. Augustinegrass in Florida. Do not use this product on turfgrass where desirable clovers are present.

If the lawn has been seeded recently, wait until after the third mowing before using this product. Do not seed, overseed or sprig the treated area for 10 weeks after application.

USE RESTRICTIONS:

The use of [TURF Fertilizer Broadleaf Plus Dimension Weed Control] on lawns and ornamental turfgrasses that are not well established, or have been weakened by stress due to mechanical operations, chemical injury, disease, insects, pests, excessive temperatures, or lack of moisture may increase the chances for turfgrass injury. Allow turfgrass weakened by these stresses to recover before application of this product.

Do not use this product on or near desirable plants, including within the drip line of the roots of desirable trees and shrubs, since injury may result.

Do not apply directly to or near water, storm drains, gutters, sewers, or drainage ditches.

Do not apply within 25 feet of rivers, fish ponds, lakes, streams, reservoirs, marshes, estuaries, bays, and oceans.

Do not apply when windy.

Apply this product directly to your lawn, and sweep any product landing on the driveway, sidewalk, gutter, or street back onto the treated area. To prevent product runoff, do not over water the treated area(s) to the point of runoff or apply when raining or when rain is expected that day.

Do not exceed specified dosage for any area.

Do not use clippings from treated areas for composting or for mulching vegetables or fruit trees.

[WHEN TO APPLY]

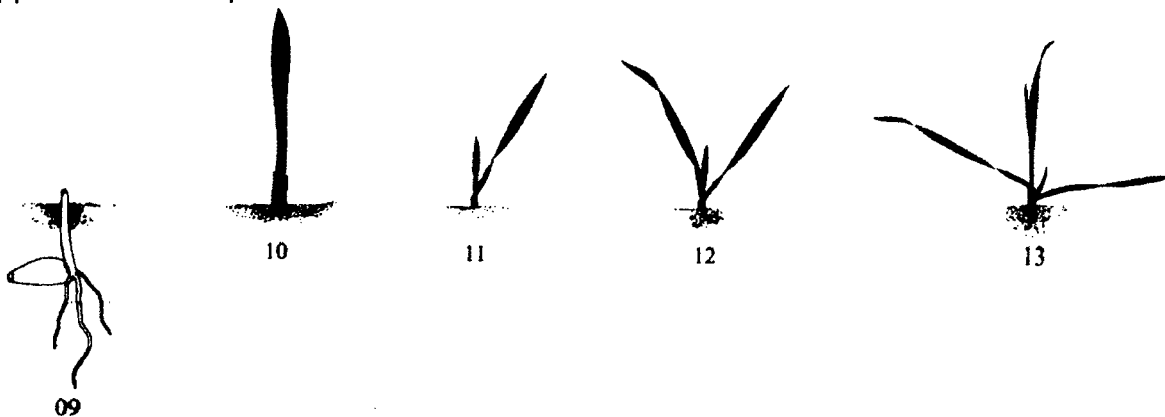

This product may be applied to established lawns as a single application or as split applications in the spring, early summer, or fall.

For the best results in the spring, apply this product one to two (1 to 2) weeks before the expected germination of crabgrass. When the period of germination for crabgrass and other weeds listed on this label extends into early summer, then a second application can be made at 6 to 10 weeks after the initial application..

For control of crabgrass and other listed grasses: This product is a preemergent herbicide to control crabgrass (smooth, southern and large) and other susceptible annual grasses. This product may also provide early post emergent control of crabgrass. However, post emergent crabgrass control will be obtained only when this product is applied before the first tiller stage of crabgrass.

[start optional growth stage description]

The graphics below indicate the growth stages of crabgrass, and the optimum timing for application of this product to assure control:

BEST Grassy weed control	GOOD Grassy weed control	POOR Grassy weed control
1 to 2 weeks before germination	Stages 9, 10, 11, or 12 above	Stage 13 or greater

[end optional growth stage description]

For broadleaf weed control:

Best results are obtained during the spring and fall when broadleaf weeds are present, young and actively growing under adequate soil moisture and favorable temperatures (50° to 80°F).

[HOW TO APPLY]

This product needs to stick to the leaves of broadleaf weeds and should be applied when the grass is wet from dew or rain; poor results will occur if it is applied to dry lawns. The lawn should not be watered or disturbed for 24 hours after application. Delay mowing for 3 days after application.

Apply this product when the wind is calm. Avoid spreading granules onto flowers, vegetables, and ornamental shrubbery or desirable plants.

[HOW MUCH TO APPLY:]

[Option 1a]

Kentucky bluegrass, fescue spp., perennial ryegrass, common bermudagrass, and zoysiagrass[.] [:Apply [2.5 to 3.6] pounds of product per 1,000 square feet of established turfgrass.]

Hybrid bermudagrass, bahiagrass and buffalograss[.] [

Apply [2.0 to 3.0 pounds] [xx.x pounds] of product per 1,000 square feet of established turfgrass.]

[Option 1b]

[Kentucky bluegrass, fescue spp., perennial ryegrass, common bermudagrass, zoysiagrass, hybrid bermudagrass, bahiagrass and buffalograss.] [: Apply [xx.x] pounds of product per 1,000 square feet of turfgrass. A second application may be made after 30 days. The maximum number of broadcast applications per treatment site is 2 per year.

New York State: Do not exceed one application at the maximum rate of 3.6 pounds of product per 1,000 sq. ft. per year [0.25 lb. active ingredient of dithiopyr per acre per year].

Other States: The maximum broadcast application rate is 3.6 pounds of product per 1,000 sq. ft. per application [1.15 lb 2,4-D ae, 0.26 lb MCPP-p acid equivalent, 0.11 lb dicamba acid equivalent, and 0.25 lb dithiopyr per acre per application]. The maximum number of broadcast applications is limited to 2 per year with a minimum of 30 days between applications. The maximum seasonal rate is 7.2 pounds of product per 1,000 sq.ft. [2.30 lb 2,4-D acid equivalent, 0.52 lb MCPP-p acid equivalent, 0.22 lb dicamba acid equivalent, and 0.50 lb. dithiopyr per acre].

[Optional Heading:] [Spreader Settings]

[Note: Registratn/Subregistrant will insert appropriate spreader setting information based on spreader models and use rate.]

Optional [Application Equipment and Instructions] [Spreader Directions]:

[Determining Your Lawn's Square Footage

To determine how much of this product to apply, you must determine the square footage of your lawn. An easy way to do this is to walk the length of your lawn, figuring that one pace equals approximately 3 feet. Do the same with the width of the lawn. Then multiply the length by the width to arrive at the total. Make sure you subtract the square footage of your home and driveway when calculating the total square footage of your lawn. If your lawn has an irregular shape, try dividing it up into a number of square

areas. Calculate the square footage for each area, then add the figures together to reach your total lawn size.]

[Insert icon representing footprint of house, driveway and lawn]

[Spreader Tips

The two main types of spreaders are the Drop Spreader, which drops the material straight down the width of the spreader as you push, and the Broadcast Spreader (also known as a rotary), which throws the material from the spreader.]

[Drop Spreader: [(See Fig. A.)] First make two passes along the top of the area you'll be covering. Then make two passes along the bottom area. Then move back and forth along the long part of the lawn. On each pass, as you reach the strips at the top and bottom of the area to be covered, shut off the spreader. It's also important to shut off the spreader when you are stopped.]

[Insert drop spreader icon]

[Insert icon showing spreader path]

[above pictogram is optional] [Fig. A.]

[Broadcast Spreader: [(See Fig. B.)] Apply in a single pass by starting on the outside border and apply in a circular path working toward the center.]
