DIRECTIONS FOR USE**

COTTON: M & D is useful as a directed spray application to weeds in cotton for post-emergent control of weeds and grasses, including Johnsongrass, nutsedge, watergrass, goosegrass, dallisgrass, and cocklebur.

Mix at a rate of 1 gallon of M & D (equivalent to 4 1/2 pounds DSMA Hexahydrate) plus 1 quart of suitable surfactant in 50 gallons of water. Apply at a broadcast rate of 40 gallons of this solution per acre. For band application, apply at a rate of one gallon of this solution for each one inch of band width to be treated on cotton grown in 40 inch rows. A second application may be required during humid growing conditions. Time the second application, if necessary about 1 to 3 weeks after the first application.

APPLY ONLY WHEN COTTON IS 3 INCHES HIGH TO FIRST BLOOM. DO NOT FEED TREATED FOLIAGE TO LIVESTOCK, OR GRAZE TREATED AREAS.

Slight burning and a reddish discoloration of the cotton leaf may occasionally occur following the recommended treatment, but the cotton plant will develop normally.

NON-CROP: M & D is useful for controlling Johnsongrass, nutsedge, watergrass, goosegrass and other weeds on drainage ditch banks, rights of way, storage yards and similar non-crop areas.

Mix M & D at a rate of 1 gallon of M & D (equivalent to 4 1/2 pounds of DSMA Hexahydrate) plus 1 quart of suitable surfactant in 50 gallons of water. Spray the unwanted vegetation thoroughly to the point of run-off. Any spray equipment that gives good coverage may be used. If regrowth occurs re-treat as required.
