

LACCO SAN-O-FLY is prepared especially for use against such insects as flies, fleas, bedbugs, mosquitoes, and clothes moths.

REMOVE PETS, BIRDS, AND COVER FISH AQUARIUMS BEFORE SPRAYING.

FLIES, MOSQUITOES: Close doors and windows in rooms to be treated. Direct a heavy cloud of SAN-O-FLY spray upward into the room. Fill entire room with vapor. Doors and windows should remain closed for 15 or 20 minutes. Do not remain in treated areas. Ventilate the area after treatment is completed and sweep up and destroy fallen insects. Repeat treatments when necessary. Do not apply directly on food. Foods should be removed or covered during treatment. All food processing surfaces should be covered during treatment or thoroughly cleaned before using. When using the product in these areas, apply only when the facility is not in operation.

FLEAS: Thoroughly spray infested areas, taking care to work the spray into all cracks, baseboards, floor coverings and other hiding places, particularly in the sleeping quarters of animals. Direct contact on insects is necessary and repeated applications are required to obtain and maintain good control.

BEDBUGS: Thoroughly spray infested rooms, beds and mattresses. Cover floors, walls and ceilings. Pay particular attention to baseboards, cracks, corners and other insect hiding places. Using an oil can, saturate springs and bed. Spray other furniture, being certain to wet seams and corners. Repeat each week for a total of three or four applications. This should give complete control. If the insects reappear make additional treatments until control is obtained.
