

# METHAR 100

Disodium Methanearsonate

METHAR is a selective Dallisgrass Killer in the presence of Bermuda grass at the recommended rate of application.

Do not apply to dry turf during hot dry spells. Restore soil moisture by watering turf well before METHAR applications are made.

Slight discoloration to the Bermuda Turf may occur but will return to its normal color in a matter of a few days.

Do not use METHAR on St. Augustine, Bahia, Carpet or Centipede grasses.

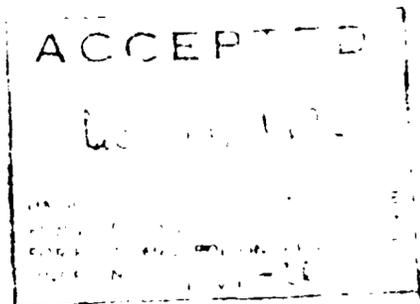

Do not use the rate of application shown on this label on Kentucky, Mexican Blue, Fescue or Bent grasses as severe injury will occur.

## SELECTIVITY OF METHAR

## DIRECTIONS FOR EASY APPLICATION

METHAR is readily soluble in water. For best control and coverage the addition of one pint of "All Wet" (a 100% non-ionic wetting agent) should be added for every 25 gallons water in the Spray Tank.

FOR DALLISGRASS CONTROL IN BERMUDA FAIRWAY TURF dilute 8 pounds "Methar" in 75 to 100 gallons water and uniformly spray one acre. Make two applications at 7 day intervals. Apply during early stages of growth.

As all Dallisgrass seed does not germinate at the same time duplicate applications may have to be made if regrowth occurs later in the season.
