Effective Control of Roach Populations by Inhibiting Reproduction for 120 Days.

**ACTIVE INGREDIENT:**

2-[1-Methyl-2-(4-phenoxyphenoxy) ethoxy] pyridine

**INERT INGREDIENTS**

\*Contains petroleum distillate

NYLAR® - Registered trademark of McLaughlin Gormley King Co.

KEEP OUT OF REACH OF CHILDREN

**WARNING**

STATEMENT OF PRACTICAL TREATMENT

**IF SWALLOWED:** Call a physician or Poison Control Center immediately. Do not induce vomiting because of aspiration pneumonia hazard.

**IF IN EYES:** Flush with plenty of water. Get medical attention if irritation persists.

**IF ON SKIN OR CLOTHING:** Remove contaminated clothing and wash before reuse. Wash skin with soap and warm water. Get medical attention if irritation persists.

**PRECAUTIONARY STATEMENTS****HAZARDS TO HUMANS AND DOMESTIC ANIMALS****WARNING**

Causes temporary eye irritation. Harmful if swallowed. Do not induce vomiting because of aspiration pneumonia hazard. Contains petroleum distillate. Avoid contact with skin or eyes or clothing. In case of contact, flush with plenty of water. Wash with soap and warm water after use. Obtain medical attention if irritation persists. Avoid contamination of food or feedstuffs.

Do not use in edible product areas of food processing plants, restaurants, or other areas where food is commercially prepared or processed. Do not use in serving areas while food is exposed. Avoid contamination of food, feedstuffs, or water supply.

**DIRECTIONS FOR USE**

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

**NOTE:** NYLAR is an insect growth regulator that destroys cockroach populations without direct poisoning like conventional insecticides. NYLAR controls roach populations by mimicking growth hormones found naturally in insects which affects the immature individuals in the population thus preventing reproduction. One of the effects of NYLAR will be roaches exhibiting crinkled and twisted wings a couple of weeks after application. These are sterile individuals that will not reproduce, therefore the population will gradually be eliminated. If large roach populations are present a conventional insecticide that is effective in killing these insects should be used in conjunction with NYLAR to kill much of the adult population. NYLAR will not affect the reproduction of roaches that are adults prior to spraying. This should be followed up with an application of NYLAR every 120 days to maintain continuous cockroach control.

**INDOOR COCKROACH CONTROL**

**Spray Preparation:** Prepare a diluted spray solution by adding 8.6 ml of NYLAR 10EC to 1 gallon of water. Partially fill mixing container with water, add NYLAR, shake and fill to final volume. Use diluted spray solution within 48 hours of mixing. Shake well before each use.

Applications within residential buildings including homes and apartment buildings and within non-food areas of industrial, institutional and commercial buildings such as those listed above. Apply as a surface spray at the rate of 1 gallon of diluted solution per 1,000 square feet of surface area and as a spot treatment and crack and crevice spray with any low pressure sprayer typically used for indoor applications. Treat all areas that may harbor cockroaches. These include walls, along and behind baseboards, beneath and behind sinks, stoves, refrigerators and cabinets, around plumbing and other utility installations, infested furniture and the inside of cabinets and closets.

**STORAGE AND DISPOSAL**

**STORAGE:** Store in a cool, dry place. Keep container closed.

**CONTAINER DISPOSAL:** Do not reuse empty container. Wrap container in several layers of newspaper and discard in trash.
