EPA Reg. No. 1021-1808

EPA Est. No. 1021-MN-2

Federal regulations prohibit CFC propellants in aerosols

**PRECAUTIONARY STATEMENTS**  
**HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

**CAUTION**

Harmful if swallowed or absorbed through skin. Avoid contact with skin, eyes, or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, or using tobacco. Remove and wash contaminated clothing before reuse.

**ENVIRONMENTAL HAZARDS**

This product is toxic to fish. Do not apply directly to water. Do not contaminate water when disposing of equipment washwater or rinsate

**PHYSICAL OR CHEMICAL HAZARDS**

**Contents under pressure.** Do not use or store near heat or open flame. Do not puncture or incinerate container. Exposure to temperatures above 130°F may cause bursting. Do not use this product in or on electrical equipment due to possibility of shock hazard.

**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

**READ ALL DIRECTIONS COMPLETELY BEFORE USE**

EVERCIDE® Ant and Roach Spray 21322 [brand name] is intended to use around residential structures to keep ants from entering the structure. The product will deliver a stream of product 10 to 15 feet long to help you treat hard to reach areas around the house. Direct your application to areas that ants and other insects use as common entry points and foraging trails. This product is especially useful outside in early spring when ants emerge and attempt to enter the house. Use it again in the fall when ants may attempt to come inside for the winter.

05/31/2005

1/2

SHAKE WELL BEFORE EACH USE. HOLD CONTAINER UPRIGHT. APPLY IMMEDIATELY TO PREVENT BURSTS and always use the enclosed red extension tube to direct the application. A spare red extension tube is included with each can.

For best results, follow directions for specific insects and use areas. **This product is designed for outdoor use.** Do not use on animals. Any liquid product may adversely affect some building materials. Always test in an inconspicuous [hidden] area prior to widespread use.

DO NOT CONTAMINATE FOOD AREAS.

OUTDOOR USE: (Graphic – Picture of the side of a house and the can and the area to treat)

Spray with caution when wind conditions may create a mist that may blow back to applicator. Always attempt [try] to use the attached red extension tube or spare. When engaged, spray will shoot out a stream 10 to 15 feet long. The liquid will expand upon hitting a target surface, and then leave an invisible residual deposit to kill ants. Look for ant activity around the outside of the house and spray outdoor surface areas, contacting as many insects as possible. Do not apply this product in or around bodies of water.

ANTS: Focus your treatment in key areas outside the house where you suspect ants are entering the structure, such as around downspouts and gutters and near windowsills and door openings. Spray ants directly where possible. Seal up any visible exterior cracks where ants can be seen entering the home. Spray ant trails, hills, and mounds and other areas of entry and infestation.

CARPENTER ANTS: Carpenter ants usually come from an outside colony and enter your house looking to establish a satellite colony in an area containing water-damaged wood. Carpenter Ants are easy to identify because they are larger than all other pest ants. Often you will find them living in wood that has been in contact with water, such as around downspouts

and gutters, near windowsills, door openings, close to leaking water pipes, and decks. Carpenter ants are most active between dusk and dawn. Locate their outside trails during this time. Carpenter ants follow distinct trails such as edges of landscape timbers, along the ground close to outside walls, near downspouts, or along the edge of an outside wall. After a careful inspection around the outside of the house, apply EVERCIDE® Ant and Roach Spray 21322 [brand name] to all areas where you suspect ants are entering the home. Seal any visible exterior cracks where ants can be seen entering the home. If ants are discovered inside the home, use a suitable indoor ant control product [name brand] to treat indoors. If you find the main colony outside in the yard, treat areas where ants are seen entering the main colony.

SPIDERS: Spray directly on spiders and webs.

CRAWLING INSECTS: Cockroaches, Boxelder Bugs, Lady Bugs, Crickets, and Sowbugs. Focus your treatment in key areas outside the house where you suspect these insects are entering the structure, such as around downspouts and gutters and near windowsills and door openings. Spray insects directly where possible. Seal up any visible exterior cracks where crawling insects can be seen entering the home.

#### STORAGE AND DISPOSAL

STORAGE: Store in a cool, dry place. Keep container closed.

DISPOSAL:

Do Not Puncture or Incinerate!

If empty: Place in trash or offer for recycling if available.

If partly filled: Call your local solid waste agency or 1-800-CLEANUP for disposal instructions.
