

NET CONTENTS _____ GALLONS

ALDREC

**An Emulsifiable Concentrate Containing
four pounds Technical Aldrin* per gallon
For Use by Professional Pest Control Operators Only**

ACCEPTED
JUL 30 1982
Under the Federal Insecticide,
Fungicide, and Rodenticide Act,
as amended, for the pesticide
registered under
EPA Reg. No. 1022-220

| | |
|--|---------|
| ACTIVE INGREDIENTS: | |
| Aldrin* | 42.50% |
| Hexachlorohexahydro-Endo, Exo-Dimethanonaphthalene | 40.38%* |
| Related Compounds | 2.12%* |
| Aromatic Petroleum Derivative Solvent | 52.50% |
| INERT INGREDIENTS: | |
| Total | 100.0% |

KEEP OUT OF REACH OF CHILDREN

WARNING STATEMENT OF PRACTICAL TREATMENT

If swallowed—Call a physician or Poison Control Center immediately. Gastric lavage is indicated if material was taken internally. **DO NOT INDUCE vomiting unless other treatment is not available.** Vomiting may cause aspiration pneumonia. If it is necessary to induce vomiting, give victim one or two glasses of water and insert finger in back of throat. Repeat until vomit fluid is clear. Do not induce vomiting or give anything by mouth to an unconscious person.

If inhaled—Remove victim to fresh air. Apply respiration if indicated.

If on skin—Wash immediately with soap and water. Wash contaminated clothing before reuse.

If in eyes—Flush eyes with water. Call a physician immediately.

See side panel for additional precautions.

1. The user should read the entire label carefully before using this product. It contains important safety information. If the user does not understand the information on this label, he should ask the dealer for help.

2. Do not use this product in a manner inconsistent with its labeling. Do not use this product in a manner that is prohibited by law.

3. Do not use this product in a manner that is prohibited by law.

4. Do not use this product in a manner that is prohibited by law.

5. Do not use this product in a manner that is prohibited by law.

6. Do not use this product in a manner that is prohibited by law.

7. Do not use this product in a manner that is prohibited by law.

8. Do not use this product in a manner that is prohibited by law.

9. Do not use this product in a manner that is prohibited by law.

10. Do not use this product in a manner that is prohibited by law.

RETREATMENT RESTRICTIONS

1. Retreatment for subterranean termites should only be made when there is evidence of reinfestation subsequent to the initial treatment of the structure. Retreatment of the structure should be based on the results of a termite inspection.
2. Retreatment may be made at intervals of 30 days with the application of a spot treatment to the structure. This application should be made as a spot treatment to the structure. Retreatment of the entire structure should be avoided.

NOTICE

- 1. This product is a restricted use pesticide. It is intended for use by professional pest control operators only.
- 2. This product is a restricted use pesticide. It is intended for use by professional pest control operators only.
- 3. This product is a restricted use pesticide. It is intended for use by professional pest control operators only.

**PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS
AND DOMESTIC ANIMALS
WARNING**

Hazardous if swallowed, inhaled, or absorbed through the skin. Do not get in eyes, on skin or on clothing. Do not breathe spray mist or vapor. When handling Aldrex, wear clean synthetic rubber gloves, protective clothing and a pesticide respirator (only approved by the Mining Enforcement and Safety Administration (formerly the U.S. Bureau of Mines) and by the National Institute for Occupational Safety and Health under the provisions of 30 CFR Part 11. Do not allow to drift to areas occupied by unprotected humans or beneficial animals.

ENVIRONMENTAL HAZARDS

This product is toxic to fish and wild life. Do not apply directly to water. Do not contaminate water by cleaning of equipment or disposal of wastes.

DIRECTIONS FOR USE

Only for retail sale to and use and storage by commercial pest control operators.

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

STORAGE AND DISPOSAL

PROHIBITIONS. Do not contaminate water, food or feed by storage or disposal. Open dumping is prohibited.

PESTICIDE DISPOSAL. Pesticide spray mixture or rinsate that cannot be used according to label instructions must be disposed of according to Federal, State or local procedures under the Resource Conservation and Recovery Act.

CONTAINER DISPOSAL. Triple rinse (or equivalent) and offer for recycling or reconditioning, or dispose of in a sanitary land fill, or by other approved State and local procedures.

GENERAL. Consult Federal, State or local disposal authorities for approved alternative procedures.

Chemicals for soil treatment are used to establish a barrier which is repellent to termites. The chemical emulsion must be thoroughly dispersed in the soil to produce a barrier between the wood in the structure and the termite colonies in the soil. To meet EPA termite proofing requirements, follow the latest edition of the Housing and Urban Development (HUD) U.S. Minimum Property Standards.

It is necessary for the effective use of this product that the service technician be familiar with current control practices including the use of trenching, sub-slab treatment and low pressure spray application.

and Code of this. Choice of appropriate procedures is dependent upon a number of factors including the location of the various soil types, depth of the soil, and the water content of the soil. The following are the minimum requirements for soil treatment. The soil must be treated with a minimum of 14 gallons of Aldrex per 10 square feet of soil. The soil must be treated with a minimum of 14 gallons of Aldrex per 10 square feet of soil. The soil must be treated with a minimum of 14 gallons of Aldrex per 10 square feet of soil.

When the soil is treated with water, the water must be clean and free of any contaminants. The water must be applied to the soil in a uniform manner. The soil must be treated with a minimum of 14 gallons of Aldrex per 10 square feet of soil. The soil must be treated with a minimum of 14 gallons of Aldrex per 10 square feet of soil. The soil must be treated with a minimum of 14 gallons of Aldrex per 10 square feet of soil.

A barrier of the soil must be established between the wood in the structure and the termite colonies in the soil. To meet EPA termite proofing requirements, follow the latest edition of the Housing and Urban Development (HUD) U.S. Minimum Property Standards.

**PRECONSTRUCTION
SUBTERRANEAN TERMITE
TREATMENT**

Effective preconstruction subterranean termite control requires the establishment of a barrier between the wood in the structure and the termite colonies in the soil. To meet EPA termite proofing requirements, follow the latest edition of the Housing and Urban Development (HUD) U.S. Minimum Property Standards.

Use a 0.5% water emulsion of Aldrex for subterranean termite control. Mix 1 gallon of Aldrex in 95 gallons of water to produce a 0.5% water emulsion.

After grading is complete, and prior to the pouring of the slab, slab supported construction, or other concrete placement, make the following treatments. Application should be made by low pressure spray or hand-applied barriers over areas intended for covering of the porch and other exterior areas.

Establish a vertical barrier in areas such as around the base of foundation, plumbing, back-filled soil adjacent to foundation walls, and other exterior areas.

1. Where the slab is to rest on a foundation, a barrier of the soil must be established at the rate of 14 gallons per 10 square feet of soil. The soil must be treated with a minimum of 14 gallons of Aldrex per 10 square feet of soil. The soil must be treated with a minimum of 14 gallons of Aldrex per 10 square feet of soil.

a. If concrete slabs are to be poured over soil, the soil must be treated with a minimum of 14 gallons of Aldrex per 10 square feet of soil. The soil must be treated with a minimum of 14 gallons of Aldrex per 10 square feet of soil. The soil must be treated with a minimum of 14 gallons of Aldrex per 10 square feet of soil.

2. The soil must be treated with a minimum of 14 gallons of Aldrex per 10 square feet of soil. The soil must be treated with a minimum of 14 gallons of Aldrex per 10 square feet of soil. The soil must be treated with a minimum of 14 gallons of Aldrex per 10 square feet of soil.

a. The barrier must be at least 6 inches thick. The barrier must be at least 6 inches thick. The barrier must be at least 6 inches thick.

b. The barrier must be at least 6 inches thick. The barrier must be at least 6 inches thick. The barrier must be at least 6 inches thick.

c. The barrier must be at least 6 inches thick. The barrier must be at least 6 inches thick. The barrier must be at least 6 inches thick.

d. The barrier must be at least 6 inches thick. The barrier must be at least 6 inches thick. The barrier must be at least 6 inches thick.

e. The barrier must be at least 6 inches thick. The barrier must be at least 6 inches thick. The barrier must be at least 6 inches thick.

**POSTCONSTRUCTION
TREATMENTS**

Use a 0.5% emulsion for subterranean termite control. Mix 1 gallon of Aldrex in 95 gallons of water to produce a 0.5% water emulsion.

Postconstruction applications should be made by low pressure spray, and/or trenching using low pressure spray.

Do not apply emulsion or solution until foundation and/or conditioning ducts, vents, water and sewer lines and electrical conduits are known and identified. Extreme caution must be taken to avoid contamination of these structural members and airways.

1. For slab on ground construction apply at the rate of 14 gallons of Aldrex per 10 square feet. Application may be made by sub-slab injection and/or trenching. Trenches should be excavated beyond the tops of the footings. Trenching should be done on the outside of the foundation and where necessary just beneath the slab on the inside of foundation walls. Treatment may be required just beneath the slab at expansion and contraction joints.

a. Drift holes in the slab to provide a means of chemical barrier.

b. Where necessary, go through the foundation walls from the outside and force the emulsion just beneath the slab between the joists, and the foundation or expansion joints and expansion joints.

2. Finish slab foundations 1 foot or less below a trench approximately six inches wide along the outside of the foundation walls. Do not dig below the bottom of the foundation. The emulsion should be applied to the trench and the soil at

the bottom of the trench. The emulsion should be applied to the trench and the soil at the bottom of the trench. The emulsion should be applied to the trench and the soil at the bottom of the trench.
