DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

The best results will be obtained if wood to be treated is immersed for 3 minutes or longer. If dipping is not possible, 2 liberal brush or spray applications should be applied. Allow at least 1 hour between applications. Make certain all areas are fully treated to get the maximum benefits. Allow 24 hours or longer after application of the preservative prior to painting. Less paint is needed over wood treated with this water repellent wood preservative.

Fence posts, poles, foundation timbers and heavy wooden members should be free of bark, dry and well-seasoned and immersed in the product for a period of 12 to 48 hours to be an effective wood preserver.

Wood should be treated before use in construction.

RECOMMENDED USES

Windows, window frames, doors, stairs, porches, shingles, trellises, steps, subflooring, interior trim, fence pickets, fence rails, furring strips and arbors. Powderpost beetles are killed by application of this preservative. These insects will not attack the treated wood.

In addition to preventing decay, blue stain, and insect attack on wood this preservative controls warping, swelling, shrinking and end checking caused by changes in moisture content of lumber and plywood products.
